# PUBLIC VERSION

## **I. Assignment**

1. My name is Michael Starkey. I was asked by counsel for 123.NET (d/b/a Local Exchange Carriers of Michigan, Inc., hereafter “LEC-MI”) to review the information in this case between AT&T Services, Inc. and AT&T Corp. (collectively “AT&T”) and LEC-MI. Thereafter, I was asked to: (1) provide background pertaining to the invoicing practices of small exchange carriers, particularly where charges for multiple carriers are included on a single invoice via Small Exchange Carrier Access Billing (“SECAB”) Guidelines, (2) describe my review of the charges, traffic and invoices at issue in this case, and (3) discuss the discernable trends in traffic for which AT&T was assessed end office and other charges related to services provided by LEC-MI.
2. This declaration is being provided based on the information that was available to me as of September 25, 2019. I reserve the right to supplement this declaration and my opinions if/when additional relevant documents and information become available for my consideration.

## **II. Introduction and Expert Qualifications**

3. I am the President and founding partner of QSI Consulting, Inc. (“QSI”). QSI specializes in the areas of economic, financial, and technical analysis related to network industries with a special emphasis on telecommunications.
4. I have worked as a professional in the telecommunications industry since 1991 (approximately 28 years). Over the past twenty years, I have worked as a consultant for numerous communications companies (*e.g.*, AT&T, Comcast, Sirius XM Radio, Sprint, T-Mobile, Time Warner, etc.) and other industry stakeholders (*e.g.*, U.S. Department of Defense, state regulatory agencies, etc.). Prior to that, I served as the Director of Telecommunications for the Maryland Public Service Commission and as a senior economist for other state agencies authorized to regulate intrastate telecommunications markets (*i.e.*, the Illinois Commerce Commission and the Missouri Public Service Commission).
5. In my career I participated in numerous litigation efforts before state utility regulatory commissions, the Federal Communications Commission (“FCC”), and various

domestic and foreign administrative organizations. I have also provided testimony before state legislatures, the United States Patent and Trademark Office, and numerous arbitration panels. On numerous occasions, I have been accepted as an expert in telecommunications before courts of various jurisdictions. My background, education, and professional experience – including engagements wherein I served as an expert witness – are set forth in more detail in my *curriculum vitae*, included herewith as **Exhibit A**.

6. I have dedicated a large portion of my career to studying the technical, financial, and public-policy aspects of interconnection between telecommunications carriers. I have negotiated complex interconnection agreements that govern the physical, operational, and, importantly, financial means by which telecommunications carriers connect their networks and exchange calls. I have analyzed and structured inter-carrier compensation proposals and I have provided my opinions as an expert on these and similar matters in more than one hundred contested proceedings before state and federal regulators as well as various state and federal courts. As an example, in my role as a senior economic policy advisor with the Illinois Commerce Commission, I wrote numerous rules ultimately adopted in the Illinois Administrative Code facilitating the interconnection of competing telecommunications networks. This work resulted in one of the nation's first regulatory rules dealing with the exchange of local telecommunications traffic between competing carriers (*circa* 1994). More recently, I was asked to assist in forming the Secure Telephone Identity Governance Authority ("STI-GA"). The STI-GA is an industry-sponsored governance board tasked with combating automated telemarketing traffic (*i.e.*, "robo-calling") and illegal caller-identification manipulation (referred to as "spoofing"). The STI-GA provides policy and technical leadership in implementing requirements to be used in the near future by all domestic telecommunications carriers to authenticate traffic flowing between their networks. I currently serve as a member of the STI-GA Board and the Chair of its Corporate Structure Task Force.

### III. Overview of Analysis and Conclusions

7. Based on my experience and the materials I have reviewed to date in connection with this matter, I have reached the following opinions that I summarize in the following paragraph and describe in greater detail in the balance of this declaration.
8. My review indicates that AT&T should have recognized by at least May of 2010 that it was being improperly billed by Westphalia for local switching charges on toll free (8YY) traffic originating from LEC-MI's switch. Its own access charge bill payment and dispute summaries show that it was analyzing rapid growth in local switching charges and minutes of use by May of 2010. Likewise, it is clear that AT&T was analyzing (indeed disputing) 8YY query charges specific to LEC-MI's operating company number ("OCN") that grew at notable rates beginning in early 2010. Finally, even a cursory review of Westphalia's or LEC-MI's call detail records ("CDRs") would have made clear that 8YY calls specific to LEC-MI's OCN were originating from myriad locations well outside of LEC-MI's local exchange footprint (indeed, they were originating from across the country). Any of these data individually should have indicated to AT&T that it was being billed, improperly, for local switching charges on mobile-originated 8YY calls. When combined, these data discredit any argument made by AT&T that it did not know, nor could have known, of Westphalia's improper billing before the middle of 2013. AT&T's claim in this regard is further discredited by the fact that AT&T had, since shortly after competitive local exchange carrier ("CLEC") access charges were invented and more than a decade before the time period relevant to this dispute, been closely analyzing traffic patterns of individual CLECs in an attempt to identify and combat CLEC 8YY aggregation.

### IV. Background

#### *A. Summary of Complaint*

9. AT&T alleges it was wrongly billed by Westphalia Telephone Company ("Westphalia", or "WTC") for certain end office charges pertaining to toll free calls

that traversed LEC-MI's Southfield Michigan switch between February 2012 and February 2014.<sup>1</sup> AT&T claims that, despite the fact that the routing scenario giving rise to these charges began sometime in the early part of 2010, it was unaware that billed end office charges related to toll-free originated calls (referred to as 8YY traffic by AT&T) until sometime in mid-2013 (when it acquired a wireless company for whom many of the 8YY calls had been placed). The Formal Complaint in this proceeding<sup>2</sup> is related to a prior complaint filed by AT&T against Westphalia and Great Lakes Comnet ("GLC"). In that case, the FCC made certain determinations as to which company provided transport from LEC-MI's Southfield end office switch to Westphalia's tandem switch. AT&T relies, in part, on a conclusion in that prior case, to suggest it did not know, and could not have known, that it was billed for 8YY traffic switched by LEC-MI.

### ***B. SECABS***

10. AT&T acknowledges that it received LEC-MI's access charges via SECABS-compliant access invoices. For example, in its Joint Declaration AT&T concedes that, "[t]he invoices AT&T received that are associated with LEC-MI are, and have been since at least January 2012, received via e-mail and in the SECABS format."<sup>3</sup> AT&T also acknowledges that it received a "single monthly SECABS formatted invoice that included charges associated with LEC-MI, Westphalia and GLC (as well as other carriers)," yet, the "invoices separately identify the traffic associated with each of Westphalia and LEC-MI by using the Operating Company Number ('OCN') for each company."<sup>4</sup>

---

<sup>1</sup> I understand that from February 2012 to August 2013, AT&T claims to have paid re-rated end office charges on all billed minutes of use ("MOUs"), but that beginning in August 2013 AT&T also withheld payments for billed MOUs in excess of 1,874,862 MOUs per month.

<sup>2</sup> Formal Complaint of AT&T Services, Inc., August 5, 2019 ("Formal Complaint").

<sup>3</sup> Joint Declaration of Geri Lancaster and Kurt Giedinghagen, pp. 2-3("Joint Declaration") (ATT-0000003 and ATT-0000004).

<sup>4</sup> Joint Declaration, p.3 (ATT-0000004).

11. SECABS Billing Guidelines<sup>5</sup> were developed (and are maintained) by ATIS's Ordering and Billing Forum Committee. SECABS Billing Guidelines govern how telecommunications carriers will "produce complete and verifiable access bills for the [access] customers."<sup>6</sup> Certain SECABS Billing Guidelines address scenarios wherein access charges for multiple local exchange carriers ("LECs") are included on a single access invoice – referred to as Meet Point Billing "MPB" or jointly provided switched access service. The purpose of these MPB-related billing guidelines is to assist interexchange carriers ("IXCs") with understanding and verifying individual company-specific access charges billed on a single SECABS invoice. Pertinent portions of those MPB-related billing guidelines are summarized below.
12. First, a MPB-related SECABS invoice should contain the phrase "Meet Point Bill" on the first page of the invoice to denote the fact that the invoice contains charges from more than one LEC.<sup>7</sup> In addition, a unique OCN should be used to identify each of the LECs contained in the SECABS invoice and the associated access rate elements. For example, § 2.3.1.2 of the SECABS Billing Guidelines states:

The state/area specific company code is displayed on a provider's bill to identify the ratable elements by state/area when meet point service is provided under the Single Bill/Multiple Tariff or Multiple Bill/Multiple Tariff options. When using the Single Bill/Multiple Tariff or Multiple Bill options the billing company will identify all companies involved in a service by state/area specific company code.

In other words, when access charges from multiple LECs are included in a single SECABS invoice to an IXC, the state/area specific OCN is included in order to separately identify the ratable access elements associated with each LEC (by state/area). Section 3 of the SECABS Billing Guidelines<sup>8</sup> contains other information

---

<sup>5</sup> See attached as **Exhibit B**, ATIS Standard ATIS-0401005-0015. "ATIS" stands for Alliance for Telecommunications Industry Solutions.

<sup>6</sup> Ex. B, ATIS Standard ATIS-0401005-0015 (SECABS), § 1.4.

<sup>7</sup> Ex. B, ATIS Standard ATIS-0401005-0015 (SECABS), § 3.2.2 (Meet Point Bill Account Identifier).

<sup>8</sup> Ex. B, ATIS Standard ATIS-0401005-0015 (SECABS), § 3 is entitled "Producing a Paper Bill." While the SECABS invoices received by AT&T were apparently transmitted electronically via e-mail

required on SECABS MPB invoices.<sup>9</sup> For example, Section 3.6 entitled “Producing Detail Summary of Usage Charges” requires the following:

Producing Detail Summary of Usage Charges: This page(s) is only applicable to Switched Access...paper bills when usage sensitive charges are present, i.e., no corresponding mechanized record is produced. This data will be presented by feature group, by state/provider, by jurisdiction, and by usage billing period. All usage rate elements and directionality displayed in the Detail of Usage Charges section will also be displayed.

13. The required data elements under Section 3.6 include the following:

- Jurisdiction: “The narrative description of the jurisdiction (i.e. Interstate/InterLATA, Interstate/IntraLATA, Intrastate/InterLATA, Intrastate/IntraLATA, Local, Interstate/InterMTA, Intrastate/InterMTA and IntraMTA).”
- Quantity: “The number of minutes, calls, lines, queries, etc. to which a usage rate is being applied.”
- Rate Element: “An identification of the usage charge being billed (e.g., Residual Interconnection Charge [RIC], Carrier Common Line, Tandem Switched Facility, Tandem Switched Termination, etc.) including directionality. Refer to the appropriate access/interconnection tariff for a complete list of elements.”
- State Identification: “The state from which the usage charges were incurred.”
- Usage Amount: “The dollar amount for a specific usage rate element.”
- State/Area Specific Company Code (for Meet Point Billing): “The state/area specific company code identifies a company at the state/area level when that company provides access/interconnection service in more than one state/area. (Refer to section 2.3.1.2).”

14. Section 3.10 entitled “Producing the Detail of Usage Charges” states:

---

(as opposed to receiving a hard-copy paper bill), the SECABS invoices AT&T received followed the formatting described under Section 3 of the SECABS Billing Guidelines.

<sup>9</sup> Section 3 contains certain categories of data to be contained in a SECABS invoice, including: “Required Data Elements” (§ 3.2.1 and § 3.3.1 and § 3.4.1) and “Additional Data Elements Required for Meet Point Billing” (§ 3.2.2).

The Detail of Usage Charges section should be provided when usage charges are present. These detail amounts comprise the total usage charges amount as displayed on the Face Page of the bill. This section should identify the end office for which the usage applies, the usage cycle being billed (from and thru dates), jurisdiction, Minutes of Use (MOUs), amount, rate, directionality (originating/terminating), Busy Hour Minutes Capacity (BHMC) quantity and type, mileage, and rate element, e.g., Residual Interconnection Charge (RIC), Tandem Switching, and Tandem Switched Facility...The switch or tandem that serves the customer's switch must also be identified to support the mileage measurement for the Local Transport Facility rates...For non-Wireless Billing, Interstate should be further broken down into Interstate/InterLATA and Interstate/IntraLATA when the rating is different. For non-Wireless Billing, Intrastate should be further broken down into Intrastate/InterLATA and Intrastate/IntraLATA when the rating is different...

15. In sum, the SECABS formatted invoices AT&T received (that included charges associated with LEC-MI access services) provided sufficient information for AT&T to: (1) understand that charges from multiple LECs were included on the invoice; (2) separately identify, for each LEC, associated ratable access elements; (3) understand the jurisdiction of the access services it was being billed; (4) verify the quantity of access services billed (*e.g.*, queries, minutes, calls) by each LEC; (5) identify each individual rate element billed; (6) identify the directionality (*i.e.*, originating versus terminating) of each rate element; (7) verify the total dollar amount billed for each individual usage element; and (8) identify the end office(s) for which the usage applied.

**V. AT&T Is A Sophisticated Industry Player That Has Been Well Aware Of – And Actively Opposed – CLEC Access Charges, Including Originating Access Charges Associated With 8YY Aggregation, For Nearly Two Decades**

16. Prior to the divestiture of AT&T, access charges were not needed. AT&T held a monopoly over the long-distance *and* local telephone markets, and therefore, AT&T could simply undertake an internal company allocation of long-distance revenues to

properly fund its own local networks used to complete long-distance calls.<sup>10</sup> Once the Modification of Final Judgment (“MFJ”)<sup>11</sup> divested AT&T of its local networks (spinning off the local operations into separate unaffiliated Regional Bell Operating Companies or “RBOCs” and leaving the original AT&T only with the “long lines” – or long distance network – that connected individual local networks), the ability to properly compensate local networks for their role in completing a long-distance call via an AT&T internal company allocation was no longer possible. The new financial arrangement devised by the FCC to compensate local networks for their role in competing long distance calls was “access charges.” These access charges were to be assessed by local network providers (LECs) to long-distance providers (IXCs) who used LEC local networks to originate or terminate a long-distance call. Access charges were first codified by the FCC in its rules at 47 C.F.R. § 69 in 1983.<sup>12</sup>

17. When first implemented, access charges were assessed by a small number of LECs – *i.e.*, the seven RBOCs that were divested from AT&T and smaller, independent LECs operating in predominately rural areas. With the advent of local competition via the *Telecommunications Act of 1996* (“TA96”)<sup>13</sup>, numerous new LECs – referred to as CLECs – began offering access services and began assessing access charges to IXCs. Shortly thereafter (in December 1996), the FCC initiated a rulemaking proceeding to examine access charge reform, including whether CLECs can exercise market power regarding terminating access services and whether and how the FCC should regulate

---

<sup>10</sup> It was standard regulatory policy at that time (*i.e.*, pre-divestiture) to set toll rates substantially in excess of their underlying costs so as to generate revenues necessary to subsidize local connectivity to the network. This regulatory policy, generally referred to as “universal service,” was intended to maximize the number of subscribers to the network by offering local network access at the lowest rates possible, including in most cases, local telephone rates which were set below their average, per-unit costs.

<sup>11</sup> *United States of America v. Western Electric Company, Inc. and American Telephone and Telegraph Co.*, United States District Court for the District of Columbia, Civil Action No. 82-0192, Modification of Final Judgment, Adopted August 24, 1982 (“MFJ”).

<sup>12</sup> 48 FR 10358, Mar. 11, 1983, see 47 C.F.R. § 69 – *Access Charges*.

<sup>13</sup> Telecommunications Act of 1996, Pub. L. No. 104-104, 110 Stat. 56, codified at 47 U.S.C. §§ 151 et. Seq (“TA96”) February 8, 1996.

those services.<sup>14</sup> Since that point in time, CLEC access charges – both originating and terminating charges – have been the topic of numerous FCC decisions and disputes between IXCs and CLECs. And for the entire time period from 1996 until the present, AT&T has been an extremely active and vocal opponent of CLEC access charges.

18. By late 1998 (less than two years after the FCC's Access Reform NPRM and less than three years after the TA96), AT&T was attempting to avoid CLEC access charges by avoiding CLEC access services altogether.<sup>15</sup> By mid-1999, AT&T was involved in section 208 complaint proceedings related to CLEC access charges.<sup>16</sup> Additionally, in the same mid-1999 timeframe, the FCC had already denied an AT&T petition for declaratory ruling that IXCs may refuse to purchase CLECs' switched access services.<sup>17</sup> Likewise, beginning at least as early as 2000, AT&T was frequently refusing to pay CLEC access invoices that it viewed as unreasonable,<sup>18</sup> as well as notifying CLECs of AT&T's refusal to exchange access traffic, block access

---

<sup>14</sup> *In the Matter of Access Charge Reform*, Seventh Report and Order and Further Notice of Proposed Rulemaking, CC Docket No. 96-262, FCC 01-146, released April 27, 2001, ¶ 10 ("7<sup>th</sup> Report and Order"), citing *In the Matter of Access Charge Reform*, Notice of Proposed Rulemaking, Third Report and Order, and Notice of Inquiry, CC Docket No. 96-262, FCC 96-488, released December 24, 1996 ("Access Reform NPRM").

<sup>15</sup> AT&T Petition for Declaratory Ruling, CCB/CPD No. 98-63, October 23, 1998.

<sup>16</sup> See, e.g., 7<sup>th</sup> Report and Order, ¶ 16 ("The Commission addressed issues related to competitive carriers' access services in three different section 208 complaint proceedings. On July 16, 1999, in *MGC v. AT&T*, the Commission ruled that AT&T was liable to MGC for originating access charges at MGC's tariffed rate because AT&T had failed to take the necessary steps to terminate its access service arrangement with MGC...Finally, on March 13, 2001, in *Total Tel. v. AT&T*, the Commission ruled that a competitive access provider's rates for terminating access were the product of a sham arrangement to inflate its rates and to pass on a portion of the inflated rate to the carrier's single end user. Accordingly, we ruled in that proceeding that AT&T did not violate sections 201(a), 202(a), 214(a) or 251(a) of the Act when it declined the access provider's terminating access service and blocked traffic bound for the access provider's single end-user customer.")

<sup>17</sup> 7<sup>th</sup> Report and Order, ¶ 17, citing FCC Pricing Flexibility and Further Notice of Proposed Rulemaking.

<sup>18</sup> 7<sup>th</sup> Report and Order, ¶ 23 ("AT&T, on the other hand, has frequently declined altogether to pay CLEC access invoices it views as unreasonable.") See also, *Id.*, footnote 56, citing at least seven complaints regarding AT&T's non-payment of CLEC access invoices, all filed between April 2000 and March 2001.

traffic and terminate relationships with CLECs.<sup>19</sup> AT&T was also very active in voicing its opposition to CLEC access charges in the FCC's Access Charge Reform proceeding (CC Docket No. 96-262), filing more than 300 comments, notices, motions, etc. in the docket (many of which were directed at opposing CLEC access charges).

19. In mid-2000, AT&T filed comments describing what it viewed as CLEC attempts to charge IXCs supracompetitive rates for both originating and terminating switched access, and requested mandatory detariffing of CLEC access rates that exceed incumbent local exchange carrier ("ILEC") rates.<sup>20</sup> AT&T focused its opposition on CLEC *originating* access charges in comments it filed with the FCC in July 2000:

Contrary to the Commission's suggestion in the *Fifth Report and Order and FNRPM*, however, this market failure is not limited to terminating access...While end users have an incentive to choose a low-priced provider of local exchange service – for which the end user pays – an end user has no incentive to choose a low-priced provider of originating access because the costs imposed by a high priced access provider must be spread among an IXC's total customer base and will have at most a negligible effect on the end user's own long distance rates...end users in fact have an incentive to choose *high* priced access providers, because such providers generally attract end users (and hence access revenues) by pricing their local exchange service at rock-bottom prices.<sup>21</sup>

20. As part of its advocacy and its day-to-day management of CLEC access charges, AT&T implemented sophisticated internal processes to track and analyze CLEC access charges. For instance, in November 2000, AT&T met with the FCC to discuss CLEC access charges and presented a detailed analysis of minutes of use ("MOUs"), rates, and expenses associated with CLEC switched access services billed to AT&T.<sup>22</sup> This analysis tracked data separately by CLEC and by jurisdiction

---

<sup>19</sup> 7<sup>th</sup> Report and Order, ¶ 24.

<sup>20</sup> AT&T Supplemental Comments, CC Docket No. 96-262, July 12, 2000.

<sup>21</sup> AT&T Supplemental Reply Comments, CC Docket No. 96-262, July 24, 2000, pp. 2-3.

<sup>22</sup> AT&T Ex Parte, CC Docket No. 96-262, November 8, 2000, table entitled ("2000 Projected High Priced CLEC Access Expense").

(interstate/intrastate). For this analysis, AT&T told the FCC that CLEC switched access billings was growing rapidly, and that it expected CLEC access billings for the year 2000 to be *three times* that of the year 1999.<sup>23</sup> AT&T also told the FCC that one of the factors driving increases in CLEC switched access billings was “Revenue sharing with [CLEC] end-user customers.”<sup>24</sup>

21. Beginning in mid-2001, AT&T began describing to the FCC a more particular concern related to CLEC access services, i.e., aggregation of 8YY calls for purposes of assessing originating switched access charges. With respect to 8YY aggregation services, AT&T highlighted the fact that, in its opinion, “problems [] are more acute than ordinary CLEC switched access services.”<sup>25</sup> To address its concerns with CLEC originating 8YY access service, AT&T asked the FCC to: (A) “immediately benchmark...CLEC originating switched access service rates for all 8YY, toll-free traffic to the access rate charged by the...ILEC serving the same local market”<sup>26</sup> and (B) “find that revenue-sharing agreements between a CLEC and its customers based on the minutes of use or access revenues generated by the customer are an unreasonable practice and must be terminated.”<sup>27</sup> AT&T went on to describe a “CLEC 8YY aggregation scheme”<sup>28</sup> it believed CLECs used to stimulate originating 8YY traffic:

[I]n order to attract customers with large volumes of 8YY traffic to this scheme, CLECs typically use the lure of credits or “commissions” payable to the customer based on the volume of 8YY traffic that the customer generates. This CLEC revenue-sharing scheme severely distorts competition in a number of additional respects...the CLEC’s customers have an artificial incentive to maximize the amount of 8YY traffic which they generate because the more 8YY calls they can generate – calls which

---

<sup>23</sup> AT&T Ex Parte, CC Docket No. 96-262, November 8, 2000, Attachment, p. 1.

<sup>24</sup> AT&T Ex Parte, CC Docket No. 96-262, November 8, 2000, Attachment, p. 4.

<sup>25</sup> Comments of AT&T Corp., CC Docket No. 96-262, June 20, 2001, p. 3.

<sup>26</sup> Comments of AT&T Corp., CC Docket No. 96-262, June 20, 2001, p. 1.

<sup>27</sup> Comments of AT&T Corp., CC Docket No. 96-262, June 20, 2001, p. 3.

<sup>28</sup> Comments of AT&T Corp., CC Docket No. 96-262, June 20, 2001, p. 3.

cost them nothing – the larger are the commissions that they can earn from the CLEC. The increased 8YY traffic imposes wholly unnecessary and potentially substantial costs on other parties caused by the wasteful use and increased congestion of facilities used to provide 8YY services, including costs on the carriers that handle the calls, the parties that receive the 8YY calls, and the parties who are attempting to place legitimate 8YY calls.<sup>29</sup>

22. AT&T even quantified for the FCC the dollar impact from what it described as the “CLEC 8YY aggregation scheme”:

Moreover, this CLEC 8YY aggregation scheme is not a small or isolated problem...AT&T has conservatively estimated that this CLEC 8YY scheme accounted for more than \$38 million in excessive CLEC access revenues in the first eight months of 2000 alone, or over \$57 million for the year.<sup>30</sup>

23. AT&T demonstrated through its comments to the FCC that AT&T was capable of identifying particular CLECs that participate in the “8YY aggregation strategy”<sup>31</sup> and analyzing those CLECs’ traffic patterns.<sup>32</sup> AT&T also demonstrated that it was capable of identifying 8YY aggregation down to the individual telephone number level:

---

<sup>29</sup> Comments of AT&T Corp., CC Docket No. 96-262, June 20, 2001, pp. 2-3.

<sup>30</sup> Comments of AT&T Corp., CC Docket No. 96-262, June 20, 2001, p. 3.

<sup>31</sup> Comments of AT&T Corp., CC Docket No. 96-262, June 20, 2001, p. 4.

<sup>32</sup> For example, AT&T identified: (1) U.S. TelePacific (explaining that “over 99.97 percent of TelePacific’s originating traffic is 8YY traffic”); (2) Business Telecom, Inc. (explaining that “BTI marketed this plan to large aggregators of 8YY traffic as ‘a product that pays the *customer* to use it’ by generating revenues for the customer.”). Comments of AT&T Corp., CC Docket No. 96-262, June 20, 2001, pp. 4-5. See also, AT&T Reply Comments, CC Docket No. 96-262, July 20, 2001, p. 5 (“For example, on June 27, 2001, AT&T detected a CLEC customer with an 8YY revenue-sharing arrangement that had made 1 million 8YY calls from two telephone numbers resulting in the transmission of 2.8 million minutes of unwanted traffic over AT&T’s network. Similarly, on June 25, 2001, AT&T discovered a CLEC customer with an 8YY revenue-sharing arrangement that had placed 1.5 million 8YY calls for 255,000 minutes over AT&T’s network from four telephone numbers. And just this past week, on July 9, 2001, AT&T discovered another CLEC customer with a revenue-sharing agreement that had ramped up the number of 8YY calls it was placing on AT&T’s toll-free network from an average of 924 calls for 625 minutes of use per day to 22,771 calls for 16,664 minutes of use per day.”)

For example, in one recent case, AT&T found that a single billing telephone number behind a CLEC switch had generated 854,517 messages and 518,596 minutes of use over a 28-day period. These 8YY numbers were dialed sequentially by the customer. The only possible explanation for this type of sequential dialing of 8YY numbers is an attempt by the CLEC customer to artificially increase the amount of 8YY traffic originating from its business in order to increase the amount that the customer can collect from the CLEC under a revenue-sharing ‘commission’ scheme...<sup>33</sup>

24. AT&T noted that it was capable of identifying/analyzing 8YY traffic because of the billing information it received:

The CLECs, like all other carriers, are required to provide IXC with sufficient billing information to identify 8YY traffic.<sup>34</sup>

25. AT&T also voiced its clear expectation that the concerns it had with 8YY aggregation in 2001 would continue and grow:

...there is every reason to expect that this strategy will continue to grow as more and more CLECs learn how to profit from it...rates set by the Commission still give CLEC 8YY aggregators ample opportunity to continue to engage in and expand their abusive revenue-sharing practices.<sup>35</sup>

26. The primary purpose of summarizing AT&T’s conduct regarding CLEC access charges in the late 1990s-early 2000s timeframe is to demonstrate that AT&T is a sophisticated company that has been well aware of (and actively monitoring) CLEC access charges – specifically originating access charges associated with 8YY aggregation – from the outset (*i.e.*, long before the dispute between AT&T and LEC-MI arose). To recap:

- AT&T has operated as an IXC since “access charges” were first invented in 1983.

---

<sup>33</sup> Comments of AT&T Corp., CC Docket No. 96-262, June 20, 2001, p. 8.

<sup>34</sup> Comments of AT&T Corp., CC Docket No. 96-262, June 20, 2001, pp. 12-13.

<sup>35</sup> Comments of AT&T Corp., CC Docket No. 96-262, June 20, 2001, p. 6.

- AT&T operated as an IXC when “CLECs” (and by extension, CLEC access charges) were first invented in 1996.
- By 1998, AT&T was attempting to avoid CLEC access charges by avoiding CLEC access *services* altogether.
- By 1999, AT&T was involved in section 208 complaint cases pertaining to AT&T’s refusal to pay CLEC access invoices (one of which involved a CLEC engaged in access stimulation and access revenue-sharing).
- By 2000, AT&T was frequently refusing to pay CLEC access invoices that it deemed unreasonable.
- By 2000, AT&T was notifying CLECs of AT&T’s refusal to exchange access traffic, to block traffic, and terminate access arrangements with CLECs.
- By 2000, AT&T was voicing its opposition to the FCC about what AT&T viewed as unreasonably high CLECs access rates for both originating and terminating access.
- By 2000, AT&T had implemented sophisticated processes to track/analyze CLEC access charges, with capabilities to (a) track CLEC access MOUs, rates and expense down to the individual CLEC level and (b) perform trend analysis to identify increases.
- By 2000, AT&T had identified revenue sharing agreements between CLECs and their customers as a factor leading to increased CLEC access billings.
- By 2001, AT&T was voicing its opposition to the FCC about the problems it had with CLEC originating 8YY access services – labeling it a “CLEC 8YY aggregation scheme” and describing it as a problem “more acute than ordinary CLEC switched access services.”
- By 2001, AT&T was identifying individual CLECs engaged in 8YY aggregation by analyzing those CLECs’ traffic patterns.
- By 2001, AT&T was identifying individual CLEC telephone numbers engaged in 8YY aggregation by analyzing those telephone numbers’ traffic patterns.
- By 2001, AT&T was quantifying the dollar impact on AT&T from CLEC 8YY aggregation.
- By 2001, AT&T acknowledged that 8YY aggregation was identifiable via the billing information CLECs were required to provide to CLECs.
- In 2001, AT&T was anticipating CLEC 8YY aggregation to continue and grow in the future.

- From 1996 until the present, AT&T has been one of the largest, if not the largest, CLEC access customers – or, in other words, AT&T is the interexchange carrier with the largest CLEC access charge expense.

27. AT&T's track record as it relates to monitoring and critiquing CLEC access charges (including 8YY aggregation) is important information the FCC should consider when evaluating AT&T's claim that it did not know, nor could have known, that charges assessed by LEC MI were specific to originating toll-free (8YY) calls. It seems reasonable to suggest that during the period at issue in this case, as an organization, AT&T was the most knowledgeable player in the industry as it relates to 8YY-related access charges.

**VI. AT&T Could Have, And Should Have, Known The SECABS Invoices From WTC and GLC Included End Office Charges Billed for 8YY Calls That Traversed LEC-MI's End Office at All Times Relevant to the Formal Complaint**

28. Based on my review of AT&T's Complaint, and the AT&T Joint Declaration, AT&T claims it was unaware LEC-MI's switch in Southfield, Michigan had been used for 8YY aggregation until sometime in mid-2013. Further, AT&T claims that it did not understand the access bills it was receiving from WTC included charges for 8YY traffic.<sup>36</sup> Moreover, AT&T's Joint Declaration goes further to suggest it was impossible for AT&T to understand from the SECABS-formatted invoices it received that LEC-MI's switch had been used to switch 8YY traffic that did not originate with LEC-MI's end user customers:<sup>37</sup>

Based on the bills as submitted by the vendor on behalf of Westphalia as agent for LEC-MI, **AT&T had no means of knowing that LEC-MI was engaged in 8YY aggregation. Nor could AT&T tell from the bills alone that LEC-MI was assessing AT&T originating end office access charges on 8YY aggregation traffic.** Nor did LEC-MI, Westphalia or the vendor ever disclose the 8YY aggregation activities to AT&T. (emphasis added)

---

<sup>36</sup> Formal Complaint, p.12

<sup>37</sup> Joint Declaration, pp.3-4 (ATT-0000004 and ATT-0000005).

29. I do not believe that AT&T's claims are credible. As I discuss below, the SECABS-formatted invoices AT&T received from WTC allowed AT&T to identify the unique end office and other charges attributable to LEC-MI. Even though multiple LECs' charges were included on a single invoice, each LEC's charges were distinctly identified at the rate element level and attributed to each LEC via its unique OCN. The invoices also allowed AT&T to determine (a) the jurisdiction of LEC-MI's charges (*i.e.*, whether the charges relate to interstate or intrastate calls), (b) the directional nature of the charges at issue (*i.e.*, whether the charges pertain to originating and/or terminating access traffic), and, of particular interest in this case, (c) the extent to which 8YY database queries were assessed for traffic switched through LEC-MI's Southfield end office (among other relevant details).
30. Based on the information I have reviewed, it is my opinion that AT&T had sufficient detail at all times relevant to this matter to determine that it was being billed local switching charges for 8YY traffic originating from LEC-MI's OCN. Furthermore, trending analyses based on summaries of Westphalia's invoices clearly identify rapid growth in billed MOUs and otherwise point toward 8YY aggregation comprising an increasing portion of end office charges attributed to LEC-MI over time. Moreover, AT&T likely could have determined 8YY aggregation comprised an increasing portion of the end office charges billed by Westphalia for traffic switched through LEC-MI's Southfield switch by examining its own CDRs.<sup>38</sup> By comparing the SECABS-formatted access invoices it received from Westphalia with its own calling records AT&T should have been able to precisely, and promptly, identify all end office charges tied to 8YY aggregation.<sup>39</sup>

---

<sup>38</sup> I have not yet had an opportunity to review all relevant CDRs and analyses conducted by AT&T in that regard, which I understand LEC-MI has requested through interrogatories served concurrently with its Answer to AT&T's Formal Complaint, and may update my conclusions and opinions in this matter if given the opportunity to review the relevant documents.

<sup>39</sup> Similarly, I have not yet had the opportunity to review documents related to AT&T's requests for or analyses of CDRs provided by WTC pertaining to any charges it assessed for usage through LEC-MI

***A. The SECABS-formatted Invoices AT&T Received Include Details For Identifying 8YY Traffic***

31. I requested copies of Westphalia's invoices to AT&T beginning with usage in January of 2009 through February of 2014. This data can be examined to: (i) determine whether information identifying 8YY traffic specifically attributable to LEC-MI's OCN and end office switch in Southfield, Michigan is evident, and (ii) examine trends in the invoice detail that may be relevant to AT&T's damages claims. Although LEC-MI has not been able to obtain a complete set of the invoices (or invoice summaries) at issue in this case,<sup>40</sup> AT&T states that it received SECABS-formatted invoices from at least the beginning of 2012.<sup>41</sup> Further, AT&T indicated through its Joint Declaration that it had the detail necessary to examine—and dispute—those invoices at the rate element level throughout the period at issue in this dispute. That is to be expected given that AT&T was provided SECABs-compliant invoices.<sup>42</sup>
32. I reviewed several AT&T documents related to this issue, including ATTProd\_0000143, attached hereto in **Exhibit C**, which comprises a summary of the October 1, 2009 invoice AT&T received from Westphalia. At the highest level, the document includes a summary of the charges billed by Westphalia for itself (*i.e.*,
- 

switches, which I understand LEC-MI has also requested through interrogatories served concurrently with its Answer to AT&T's Formal Complaint, and may update my conclusions and opinions in this matter if given the opportunity to review the relevant documents.

<sup>40</sup> My understanding is that AT&T is the only party in this case who has, or had, a complete set of WTC's invoices to AT&T, and I have not yet had an opportunity to review those documents. I may update my opinions in this case if given an opportunity to review those documents.

<sup>41</sup> Joint Declaration, pp.3-4.

<sup>42</sup> In order to perform a more complete analysis of the issues in this case, I would prefer to examine invoices from Westphalia to AT&T from the beginning of 2009 through February 2014. I do not consider my investigation complete (as to invoicing) until I have had an opportunity to review those data.

OCN 0735), LEC-MI (OCN 2550) and others. It also separately identifies for each carrier included in the invoice: (1) rate element descriptions, (2) billed rates, (3) billed quantities, (4) jurisdictional parameters (*e.g.*, interstate versus intrastate charges), and (4) directional parameters (*i.e.*, originating traffic versus terminating traffic charges). Moreover, AT&T's invoice summary document includes internal notations identifying the amounts, by line item, AT&T determined should be paid, or disputed and withheld.

33. Based on the details included in ATTProd\_0000143, it is clear that the SECABS-formatted invoices AT&T received permitted AT&T to review, audit, and (when it deemed necessary) re-rate and/or dispute invoices at a granular level. Some of that data is summarized in Figure 1 below.

**Figure 1: Westphalia Telephone Company Interstate End Office Minutes of Use and 8YY Query Detail For LEC-MI (September 2009)**

34. Figure 1 comprises a graphical representation of the line item detail included in the WTC invoice summary for usage billed in October 2009.<sup>43</sup> As is typical in the telecommunications industry, the data included within WTC's invoice to AT&T is clearly sufficient to separately identify usage and 8YY database query charges associated with each carrier, each jurisdiction and, where applicable, each direction. WTC's invoice to AT&T in October of 2009, for example, separately identifies roughly 1.7 million terminating interstate end office MOUs, 0.3 million originating interstate MOUs, and approximately 91,000 database query charges that are uniquely attributable to LEC-MI by its OCN.<sup>44</sup> Moreover, my review of AT&T's summary of the October 2009 invoice makes clear AT&T had flagged and re-rated interstate rate element number 70 pertaining to 8YY traffic. Specifically, AT&T determined it would not pay the \$0.009018 8YY database query charge billed by WTC for 8YY traffic switched by LEC-MI. Instead, AT&T had designated that rate element to be paid at a re-rated amount radically lower than the rate on WTC's invoices to AT&T.<sup>45</sup>
35. Figure 2 below summarizes a portion of the WTC invoice to AT&T in March 2010.

---

<sup>43</sup> Access charge invoices are typically lagged by one month. October's invoice, therefore, would be expected to include data for usage that largely occurred in September depending upon the specific billing cycle.

<sup>44</sup> Ex. C, ATTProd\_0000143.

<sup>45</sup> The file does not indicate why AT&T disagreed with the \$0.009018 per query charge, and there is no indication in AT&T's damages calculation that it has off-set this self-help discount from the damages it claims here in this case.

**Figure 2: Westphalia Telephone Company Interstate End Office Minutes of Use and 8YY Query Detail For LEC-MI (February 2010)**

36. Based on my review of AT&T's summary<sup>46</sup> of the March 1, 2010 invoice it received from WTC (for February 2010 usage), AT&T could easily see that the invoice included approximately 2.5 million terminating interstate end office MOUs, roughly 0.9 million originating interstate MOUs, and about 275,000 8YY database queries attributable to LEC-MI. Moreover, as was the case with the previous invoice summary, the rate elements and quantities attributable to LEC-MI are distinctly separated from the charges applicable to other carriers (such as Westphalia) included on that same invoice. AT&T's document also shows it has enough detail to dispute and withhold payment toward the 8YY query charge of \$0.0090183 WTC had billed on 8YY traffic switched through LEC-MI.

37. This same level of detail – at a minimum – has been available within each of the AT&T invoice summary files I have been able to review to date. In fact, some of the invoice summary files AT&T produced identify rates, quantities, and rate element

<sup>46</sup> Ex. C, ATTProd\_0000149.

descriptions down to the individual CLLI code (or end office level). For example, Figure 3 below summarizes the invoice detail AT&T has made available in this case for May 2012.

**Figure 3: Westphalia Telephone Company Interstate End Office MOUs and 8YY Query Detail For May 2012 (LEC-MI, SFLDMIDICAO)<sup>47</sup>**

38. Figure 3 shows that WTC's invoice to AT&T made it easy to discern WTC had billed AT&T for roughly 17.9 million interstate originating MOUs, 1.3 million interstate terminating MOUs, and 5.7 million 8YY queries attributed to LEC-MI's Southfield switch (designated by the CLLI code: SFLDMIDICAO) for usage in May 2012. This level of invoice detail is common in the industry, and I would expect that level of detail in SECABS-formatted invoices. As was the case with the invoices for usage in September 2009 and May 2010, the detail provided for May 2012 allowed AT&T to dispute the specific database query charge WTC applied to 8YY traffic switched through LEC-MI's Southfield end office separately from all other billed rate elements in the invoice for May 2012.

---

<sup>47</sup> Ex. C, ATTProd\_0000355.

39. My review of AT&T's invoice summaries makes clear that AT&T had ample information to clearly discern the extent to which Westphalia invoices included charges for 8YY-related traffic attributable to LEC-MI's switch at all times relevant to the Formal Complaint. Moreover, as I discuss below, AT&T employees appear to have invested significant resources examining and determining whether, or to what extent, AT&T would pay Westphalia's access charge invoices (including 8YY query charges that would indicate the presence, and growth, of 8YY related access traffic).

***B. AT&T Routinely Employs Significant Resources to Analyze, Verify, and Either Pay or Dispute Access Invoices***

40. AT&T employs significant resources (both technical and human) dedicated to analyzing access charge invoices, and routinely disputes (and refuses to pay) access charge invoices when it unilaterally deems any of the invoice elements (*e.g.*, rate elements, prices, mileage assessments, or routing scenarios) problematic or outside the company's expectations (*e.g.*, 8YY traffic aggregation may be involved). Moreover, AT&T routinely places LECs on "watch lists" so that switched access invoices from LECs on those lists receive additional scrutiny from AT&T. It appears that both LEC-MI and Westphalia were on AT&T's watch list for the time period in question.<sup>48</sup>

41. It is common industry practice for IXC's – including AT&T – to routinely request CLEC's and their billing vendors to provide CDRs for analysis and invoice verification. It has been my experience that AT&T often disputes CLEC access invoices as a matter of practice until its analysis/verification is completed to AT&T's satisfaction. AT&T's Joint Declaration confirms AT&T employs dozens of employees and, separately, dozens of contractors dedicated to analyzing and verifying CLEC switched access invoices.<sup>49</sup> AT&T's Joint Declaration also explains that it

---

<sup>48</sup> See, *e.g.*, Ex. C, ATTPROD\_0001342, which contains one such list within the "FLAGGED LIST" worksheet that includes LEC-MI (OCN 2550).

<sup>49</sup> Joint Declaration, p. 2, ¶ 2.

uses the Bill Receipt and Access Verification Operations (“BRAVO”) system to systematically audit and dispute CLEC access charge invoices:

Upon receiving those electronic invoices, AT&T uploaded the files into an AT&T-proprietary billing management system called Bill Receipt and Access Verification Operations (“BRAVO”). **The BRAVO system uses the data contained in the SECABS invoices to create an online format for viewing and auditing the invoices. The information contained in the SECABS invoices that is presented through the BRAVO system includes the volume of traffic (measured in minutes of use), the jurisdiction (interstate vs. interstate), the rates and rate elements and the dollar amount of the charges.** (emphasis added)<sup>50</sup>

42. Given: (i) AT&T’s knowledge of (and long-standing opposition to) 8YY-aggregation-routing scenarios, (ii) the human and systems resources at AT&T’s disposal to scrutinize CLEC access charge invoices (both generally and already dedicated to Westphalia’s invoices), and (iii) the fact that AT&T had both LEC-MI and Westphalia on its watch list, it seems highly unlikely that AT&T would have overlooked stark traffic indicators suggesting a more detailed analysis of Westphalia’s invoices was warranted. This is particularly true given the fact that AT&T’s own documents demonstrate it was analyzing charges associated with LEC-MI’s end office charges and, more specifically, 8YY query charges as early as 2009,<sup>51</sup> 2010,<sup>52</sup> and 2011.<sup>53</sup> Further, AT&T began disputing charges for certain rate elements applied by Westphalia to traffic routed through LEC-MI’s end office switches (after an audit it conducted) in late 2011/early 2012.<sup>54</sup>
43. As I discuss below, traffic trends that were (or should have been) obvious to AT&T should have allowed AT&T to easily identify the 8YY aggregated traffic routed through LEC-MI’s switch based on Westphalia’s invoices and AT&T’s own data.

---

<sup>50</sup> Joint Declaration, pp.3-4 (ATT-0000004 and ATT-0000005).

<sup>51</sup> Ex. C, ATTProd\_0000143.

<sup>52</sup> Ex. C, ATTProd\_0000147.

<sup>53</sup> Ex. C, ATTProd\_0000195, ATTProd\_0000535.

<sup>54</sup> Joint Declaration, pp.3-4 (ATT-0000004 and ATT-0000005).

These trends include: (1) traffic volumes to LEC-MI's switch increased dramatically over a short period of time and (2) the volume of 8YY database queries substantially increased over a short period of time.

44. The data I have reviewed shows that AT&T knew (or should have known) that 8YY aggregation likely explained the significant growth in end office charges, significant growth in query charges, and LEC-MI's shift toward predominantly originating long distance traffic that began in March of 2010, grew steadily through May 2012, and peaked in about May of 2013. Moreover, AT&T knew (or should have known) that it was being billed end office switching charges for 8YY originated traffic well before "mid 2013." At any time prior to mid-2013, AT&T could have followed the common industry (and AT&T) practice of requesting CDRs from Westphalia or LEC-MI as another method to determine the extent to which 8YY aggregation was the source of the changes.

45. In addition, AT&T could have compared its own 8YY-related CDRs for traffic that originated from LEC-MI's telephone numbers to test whether the message counts and MOUs identified in Westphalia's invoices for end office charges at LEC-MI's switch in Southfield, MI corresponded to AT&T's own CDRs for its retail 8YY traffic.<sup>55</sup> Any mismatch between 8YY calls tied to LEC-MI's telephone numbers and OCN in AT&T's own data versus the number of 8YY calls for which Westphalia invoiced AT&T would provide a clear signal to AT&T—at any point in time—that it was being billed end office charges for 8YY traffic. An analysis of the CDRs AT&T could have requested would produce the same results with very little effort.<sup>56</sup> And insofar as 8YY aggregation was involved, a review of those same CDRs presumably

---

<sup>55</sup> I understand AT&T is required to retain CDRs pertaining to its 8YY toll traffic for at least 18 months pursuant to 47 CFR 42.6.

<sup>56</sup> I have not yet had the opportunity to review any documents showing the results of AT&T's comparison to its own CDRs and/or its requests and analyses of CDRs from LEC-MI or Westphalia, which I understand that LEC-MI has requested through interrogatories served concurrently with its Answer to AT&T's Formal Complaint.

would have also revealed to AT&T that it was receiving a substantial amount of 8YY calls that originated in a whole host of exchanges around the country that were not within the exchanges in which LEC-MI had numbering authority. As such, AT&T would have quickly known that any such end office charges Westphalia attributed to LEC-MI's OCN would have been ripe for audit and further inquiry. I have not yet had the opportunity to review documents that show the results of AT&T's comparison to its own CDRs and/or its requests and analyses of CDRs from LEC-MI or Westphalia, which I understand that LEC-MI has requested through interrogatories served concurrently with its Answer to AT&T's Formal Complaint.

1. AT&T Was (or Should Have Been) Aware of the Growth In Traffic To LEC-MI's Switch

46. It has been my experience that IXC's like AT&T commonly consider growth in access minutes, whether on a monthly, quarterly, or annual basis, as a reason to more thoroughly analyze access invoices they have been assessed. It has also been my experience that IXC's, including AT&T, typically dispute (and refuse to pay) access invoices while conducting their investigations. I have reviewed certain AT&T records comprising invoice summaries along with certain other documents, including documents that appear to have been created by the access billing vendor employed by Westphalia during the dispute period.<sup>57</sup> Notably, AT&T's own documentation shows that access billing from Westphalia doubled between the middle of 2010 and 2011, and that charges increased four-fold between the beginning of 2010 and September 2011.<sup>58</sup> Indeed, AT&T acknowledges that traffic volume increased significantly at LEC-MI's Southfield switch beginning in 2010:

**Beginning in or around 2010, the volume of traffic billed by the Defendants to AT&T began to increase significantly.** For example,

---

<sup>57</sup> As previously noted, I have not yet had the opportunity to review copies of the WTC invoices to AT&T and may update my conclusions and opinions to the extent those data are provided by AT&T.

<sup>58</sup> See **Exhibit D**, Direct Testimony of John W. Habiak on behalf of AT&T in MPSC Case No. U-17619, p.10 and Exhibit JH-2.

**according to AT&T's records, the volume of traffic to and from AT&T through LEC-MI's switch in Southfield in November, 2009 was about 999,000 minutes of use. By May, 2010, it increased to 1.98 million minutes; in May, 2011, it increased to 7.46 million minutes, in May, 2012, it increased to 20.13 million minutes, and in May, 2013, to 24.91 million minutes.**<sup>59</sup>

47. As shown in Figure 4 below, AT&T's own data demonstrates billed access charges from LEC-MI's Southfield Michigan end office roughly doubled in the six-month period from November 2009 to May 2010. Likewise, traffic increased nearly four-fold in the twelve-month period beginning from May 2010 to May 2011, and continued to increase steadily thereafter. I have not yet reviewed the basis for AT&T's presentation to the Michigan Public Service Commission and FCC in this regard, but AT&T appears to have relied on these data for legal and regulatory purposes and in the normal course of its business operations. It has been my experience that the growth shown in Figure 4 typically draws substantial scrutiny by IXC's like AT&T.<sup>60</sup> In fact, the FCC's Access Stimulation rules indicate that a 100% increase in access charge volume over one year's time is indicative of "access stimulation,"<sup>61</sup> which I understand AT&T has alleged with regard to the traffic subject to the instant dispute and the dispute AT&T had with Westphalia and GLC. Indeed, AT&T was a driving force behind the FCC adopting a traffic growth trigger

---

<sup>59</sup> See Ex. D, Habiak Exhibit JH-5 in MPSC Case No. U-17619, p. 4. Mr. Habiak's Exhibit comprises the April 14, 2014 Letter from Michael Hunseder (Counsel for AT&T) to Rosemary McErney Chief, Market Disputes Resolution Division, Enforcement Bureau, FCC.

<sup>60</sup> There are discrepancies between the data included in the AT&T analysis and information presented to both the Michigan Commission and the FCC when visually compared to the data presented in Figure 3 above, which are also based on AT&T's data. For example, Figure 3 suggests usage at LEC-MI's end office switch in Southfield was roughly 17 to 18 million minutes in May of 2012 whereas the materials presented to both the FCC and the Michigan Commission suggest more than 20 million minutes traversed the Southfield switch at that time. I intend to compare the underlying data when they become available.

<sup>61</sup> See 47 C.F.R. § 61.3(bbb)(1) ("A...Competitive Local Exchange Carrier engages in access stimulation when it satisfies the following two conditions: (i) Has an access revenue sharing agreement...and (ii) Has either an interstate terminating-to-originating traffic ratio of at least 3:1 in a calendar month, or has had more than a 100 percent growth in interstate originating and/or terminating switched access minutes of use in a month compared to the same month in the preceding year.")

in the access stimulation rules,<sup>62</sup> and has explained that IXC's like AT&T spend significant resources analyzing traffic patterns for the purposes of identifying CLEC's engaged in access stimulation.<sup>63</sup>

**Figure 4: LEC-MI Southfield Switch Interstate Minutes of Use<sup>64</sup>**

<sup>62</sup> See, e.g., Comments of AT&T, WC Docket 10-90, April 1, 2011, p. 19 (“...while a revenue sharing arrangement is a common badge of traffic stimulation activity, and can serve as one appropriate trigger, there are other common indicators of traffic pumping, including very large volumes of traffic relative to the number of switched access lines to which that traffic is terminated.”) See also, Reply Comments of AT&T, WC Docket No. 10-90, April 18, 2011, pp. 8-9 (“While AT&T does not propose to eliminate the Commission’s proposed [revenue sharing arrangement] trigger, it agrees with commenters such as Leap that ‘there is no reason to rely on only one trigger’ and also joins with the many commenters that advocate additional triggers, including those based on minutes of use per line per month, growth in terminating traffic, and on the ratio of originating and terminating minutes.”)

<sup>63</sup> See, e.g., Reply Comments of AT&T, WC Docket No. 10-90, April 18, 2011, pp. 9-10 (“In identifying traffic pumping LECs over the last several years, IXCs have often examined data such as the number of minutes per line or the ratio of originating and terminating traffic...”)

<sup>64</sup> See Ex. D, Habiak Exhibit JH-5, MPSC Case No. U-17619.

48. Based on the doubling of usage at the LEC-MI Southfield, MI switch between November 2009 and May 2010 alone, AT&T should have conducted a thorough investigation and should have known the extent of the 8YY traffic and 8YY aggregation flowing through LEC-MI's end office. I have not seen any indication that AT&T requested CDRs from Westphalia at that time, nor have I seen an analysis conducted by AT&T at the time this substantial growth occurred which was designed to ascertain the nature and origin of the growth in traffic as is typically performed by IXCs (who routinely analyze and dispute invoices at the rate element level). I will review any such documents if and when they become available.

2. AT&T Was (or Should Have Been) Aware of the Growth In 8YY Database Queries

49. Figure 5 below shows the rapid growth in 8YY query volume that occurred between September 2009 and February 2010. Figure 5 also shows that billed interstate 8YY query counts grew from approximately 90,000 in September 2009 to roughly 275,000 in February 2010.<sup>65</sup> That is, 8YY queries nearly tripled over that short time period (and, as shown in Figure 4 above, billed minutes of use attributable to LEC-MI's end office in Southfield doubled during that same period). Either of these trends alone was enough to warrant investigation as to the source of growth in early 2010, but when combined, I find it extremely difficult to understand why AT&T would have ignored these patterns. It is clear to me, based on these data, AT&T could have (and should have) fully understood and explored the possibility that 8YY aggregation related charges were accruing on its invoices from Westphalia no later than May 2010.

---

<sup>65</sup> See Ex. C, ATTProd\_0000143, ATTProd\_0000144, ATTProd\_0000145, ATTProd\_0000147, ATTProd\_0000148, and ATTProd\_0000149. Notably, according to the document properties listed in the native form of these documents (*i.e.*, Microsoft Excel) each of these documents appears to have been created, or last saved by Robert W. Hayes, who I understand from email I have reviewed in this case, was an AT&T Lead Financial Analyst and appears to have been heavily involved in reviewing and paying/disputing Westphalia's invoices.

**Figure 5: LEC-MI 8YY Database Query Volume  
(September 2009-February 2010)**

50. Moreover, a comparison of data in Figure 1 (data from September 2009) to the data in Figure 3 (data from May 2012) shows a dramatic shift in traffic that should have been investigated by AT&T. Figure 1 shows a ratio of *terminating-to-originating* MOUs as of September 2009 of approximately 5:1. The data in Figure 3 shows that, by May 2012, the ratio had been turned on its head and more heavily weighted towards originating traffic – *i.e.*, an *originating-to-terminating* ratio of about 13:1. Likewise, in September 2009, the 8YY query count was approximately 90,000, compared to roughly 5.6 million in May 2012 – an increase of more than 6,100%. In fact, in May 2012, 8YY database queries out-numbered terminating MOUs by a ratio of roughly 4:1. It is simply not credible for AT&T to claim that it was unaware of these obvious trends until mid-2013, but if AT&T's claim is true, then it indicates that AT&T was willfully ignorant on the topic and chose not to investigate an issue that AT&T had been actively monitoring and disputing for over a decade.

### Biography

Mr. Starkey currently serves as the President and Founding Partner of QSI Consulting, Inc. ("QSI"). QSI is a management consulting firm concentrating primarily on regulated markets including the telecommunications industry. QSI assists its clients with regulatory policy, business strategy, financial and econometric analysis and inter-carrier issues including compensation. Prior to founding QSI Mr. Starkey served as the Senior Vice President of Telecommunications Services at Competitive Strategies Group, Ltd. in Chicago, Illinois.

Mr. Starkey's consulting career began in 1996 shortly before the passage of the Telecommunications Act of 1996. Since that time, Mr. Starkey has advised some of the world's largest communications stakeholders (e.g., AT&T, Charter, Comcast, Google, SiriusXM Radio, T-Mobile, the United States General Services Administration, the U.S. Department of Defense) on a broad spectrum of issues including the most effective manner by which to interconnect competing networks. Mr. Starkey's experience spans the landscape of competitive communications including interconnection agreement negotiations, mediation, arbitration, and strategies aimed at maximizing new technology. Mr. Starkey's experience is often called upon as an expert witness. Mr. Starkey has since 1991 provided testimony in greater than 150 proceedings before approximately 40 state and foreign utility regulatory authorities, the FCC, the U.S. Patent Office, as well as legislatures and courts of varying jurisdiction.

Mr. Starkey's expertise with competitive communications issues is rooted not only in his consulting experience, but also in his previous employment. Mr. Starkey has served as an executive and economist for the Missouri, Illinois and Maryland public utility commissions, including his most recent position as Director of the Maryland Commission's Telecommunications Division (and as the Senior Policy Analyst for the Illinois Commission's Office of Policy and Planning and Senior Economist with the Missouri Public Service Commission).

### Educational Background

Bachelor of Science, Economics, International Marketing  
Missouri State University (f/k/a Southwest Missouri State University)  
*Cum Laude* Honor Graduate

Graduate Coursework, Finance  
Lincoln University

## Small Exchange Carrier Access Billing (SECAB) Guidelines

ATIS is the leading technical planning and standards development organization committed to the rapid development of global, market-driven standards for the information, entertainment and communications industry. More than 200 companies actively formulate standards in ATIS' Committees and Forums, covering issues including: IPTV, Cloud Services, Energy Efficiency, IP-Based and Wireless Technologies, Quality of Service, Billing and Operational Support, Emergency Services, Architectural Platforms and Emerging Networks. In addition, numerous Incubators, Focus and Exploratory Groups address evolving industry priorities including ehealth, cybersecurity, the transition of the PSTN, unified client architecture and machine-to-machine communications.

ATIS is the North American Organizational Partner for the 3rd Generation Partnership Project (3GPP), a member and major U.S. contributor to the International Telecommunication Union (ITU) Radio and Telecommunications' Sectors, and a member of the Inter-American Telecommunication Commission (CITEL). ATIS is accredited by the American National Standards Institute (ANSI). For more information, please visit [www.atis.org](http://www.atis.org).

## 8. Acronyms

## **1.4 Scope**

The Small Exchange Carrier Access Billing (SECAB) Guidelines document has been created to support those providers, or their vendors, who currently do not conform to the CABS Billing Output Specifications (BOS).

This document is intended to provide guidelines for producing complete and verifiable access bills for the customers. These guidelines do not increase the complexity of providing an access bill to the level that the provider can no longer produce its own bill.

SECAB is neither a replacement for, nor substitution of, the CABS BOS. These guidelines cannot establish new requirements for CABS BOS or change existing ones. It is understood that some requirements contained in this document differ and in some instances exceed the BOS paper requirements. This has been done due to the unique nature of the providers providing the bills.

SECAB identifies the information which small providers should provide in order to meet customer criteria for complete and verifiable access bills. These guidelines also include customer preference and conditional data elements.

These guidelines address access and interconnection billing requirements. It is not a requirement to use the SECAB Guidelines to bill interconnection. However, should you choose to do so, interconnection requirements have been identified. These guidelines do not address all requirements for Meet Point Billing options. The Multiple Exchange Carrier Access Billing (MECAB) contains the recommended guidelines for the billing of access/interconnection services provided to a customer by two or more providers. That document should be consulted for specific meet point criteria.

### **2.3.1.1 Overall Company Code**

The overall company code identifies the telephone company providing an access/interconnection bill. For small companies that operate in only one state, the overall company code and the state/area specific company code are generally the same.

All providers require an overall company code that is not impacted by the territory a company serves. This code may be displayed on the Face Page of the bill to identify the company presenting the bill.

In a multiple check environment within the Single Bill/Multiple Tariff or Multiple Bill/Multiple Tariff meet point options, the overall company code is displayed on individual face pages to identify companies that should be receiving separate checks. This gives the customer information that allows him to combine payments to an EC for numerous bills received.

### **2.3.1.2 State/Area Specific Company Code**

The state/area specific company code identifies a company at the state/area level when that company provides access/interconnection service in more than one state/area. The state/area specific company code will identify an exchange carrier and the specific state/area in which that carrier is providing the access/interconnection service on that bill. A company that provides service in more than one state/area may have a separate state/area specific company code for each state/area in which that company does business and will also have an overall company code.

The state/area specific company code is displayed on a provider's bill to identify the ratable elements by state/area when meet point service is provided under the Single Bill/Multiple Tariff or Multiple Bill/Multiple Tariff options. When using the Single Bill/Multiple Tariff or Multiple Bill options the billing company will identify all companies involved in a service by state/area specific company code.

**3. Producing a Paper Bill**

**3.1 General**

These guidelines were developed under the premise that an access/interconnection bill should contain detail sufficient to verify charges. As such, all bill sections and associated data elements discussed in this Section should be provided according to the specific requirements in Chapter 4 (e.g., Required, N/A). These guidelines also include data elements, which should be provided under specific circumstances as well as customer preferences for certain information as identified in Chapter 4. The display of specific rating information is dependent upon a provider's tariff.

**3.2 Producing the Face Page**

The Face Page communicates key information about the bill, which should include the following: Billing Account Number (BAN), Invoice Number, Overall Company Code, Bill Date, Due by Date, Total Amount Due, Provider Name and Address, Customer Billing Name and Address, Billing Inquiries Contact Number, Billing Inquiries Email (if provided), LATA Code and identification of the service/feature group being billed. The Billing Account Number, Invoice Number, Overall Company Code, and Bill Date should be repeated on each page of the bill.

A remittance name and address should be provided if different from the Provider Name and Address. This information could be displayed either on the Face Page of the bill or as part of a Remittance Document.

In a multiple check environment, the remit to name and address, the remit to company code and total amount due for each company should be provided on the face page.

### 3.2 Producing the Face Page (Continued)

In addition to the above key information, this page should contain all applicable balance forward amounts (Total Amount of Last Bill, Payments Applied, Adjustments Applied and Total Balance Due). This page should also contain subtotals of all current charges, which comprise the detail sections of the bill (e.g., applicable totals for Other Charges and Credits (OC&Cs), Usage, and Monthly Access Charges). Subtotals should be displayed by jurisdiction for Adjustments, OC&Cs, Usage, and Monthly Access/Interconnection. Details by Taxing Authority (e.g., State, Local) should be presented as a separate detail section. Surcharge or user fee amounts should be presented as a separate detail section.

The Total Amount Due should also be displayed and is generally the last entry. A Face Page should always be provided and is generally the first page of the bill.

If the bill contains any Meet Point Billing (MPB) arrangements, the description "Meet Point Bill" should be displayed on the Face Page of a switched access/interconnection bill. For Single Bill/Multiple Tariff, Multiple Bill/Multiple Tariff, or a Multiple State Bill, the Face Page is a total of charges for all providers and states.

The MECAB contains the recommended guidelines for the billing of access/interconnection services provided to a customer by two or more providers. That document should be consulted for specific meet point criteria.

If a provider is acting as both an unbundled provider and a facility based provider of access/interconnection service, usage must be billed on separate and uniquely identified BANs. The bill that contains charges from the unbundled provider must display the description "Unbundled Provider Bill" on the Face Page of the switched access/interconnection bill.

### 3.2.1 Required Data Elements

#### Common Data Elements:

##### **Access Customer Name Abbreviation (ACNA)**

A 5 position alphanumeric code provided on the Access Service Request (ASR) form that identifies the access/interconnection customer. At the discretion of the provider, this field may contain the billed customer's company code.

##### **Bill Date**

The provider designated date for which an access/interconnection service bill is rendered. This should be a consistent date that is often tied to the end user bill date and will always be a date subsequent or equal to the usage through date.

##### **Billing Account Number (BAN)**

A **unique** number assigned to an **account** for billing purposes that is consistent month after month. A BAN must contain a minimum of 10 and a maximum of 13 alphanumeric (i.e., A-Z, 0-9) characters. If the provider changes the BAN, then the customer must be notified in advance.

##### **Billing Inquiries Contact Number**

The telephone number of the provider representative or organization who actually handles the account and can answer a customer's questions.

##### **Billing Inquiries Email**

The provider may provide the email address of the provider representative or organization who actually handles the account and can answer a customer's questions.

##### **Customer Billing Address**

The customer's bill mailing address.

##### **Customer Billing Name**

The customer's bill mailing name.

**3.2.1 Required Data Elements (Continued)****Invoice Number**

A *unique* number assigned to a specific bill that changes monthly. This number should not contain spaces.

**Local Access Transport Area (LATA) Code**

The Local Access/Interconnection Transport Area (LATA) in which a provider is located. It is only applicable if billing is presented at LATA level or lower (i.e., when an individual bill is prepared for the LATA or NPA/NXX that a carrier operates in).

LATA Code is not applicable for wireless billing.

**Overall Company Code**

The overall company code identifies the telephone company providing an access/interconnection bill. (Refer to section 2.3.1.1).

**Provider Name and Address**

The name and address of the provider submitting the bill.

**Service/Feature Group Identification**

The description of the service/feature group being billed. (e.g., Switched Access/Interconnection Feature Group A, Switched Access/Interconnection Feature Group B, Switched Access/Interconnection Feature Group C, Switched Access/Interconnection Feature Group D, Facility.

Access/Interconnection Service, WATS Access/Interconnection Lines, Wireless Billing, etc.).

A Facility Access/Interconnection bill may contain special or switched flat rated or a combination of switched flat rated and special.

*Note: Local resale has its own service/feature group identification.*

**State/Multi State Identification**

The state from which charges were incurred (e.g., GA or XX when multiple states are represented on the invoice).

### 3.2.1 Required Data Elements (Continued)

#### **Unbundled Provider Bill Identifier**

If this is an unbundled provider bill, the phrase “Unbundled Provider Bill” must be printed on the Face Page of the switched access/interconnection bill.

#### **Balance Due Information:**

##### **Adjustments Applied**

The net total of all adjustments reflected on the current bill separated by state (Interstate, Intrastate), MTA (InterMTA, IntraMTA), Local and Non-Jurisdictionalized.

##### **Payments Applied**

The total payments which have been applied to the account. The amount should be reflected as negative to signify that the account was credited and the balance due decreased.

##### **Total Amount of Last Bill**

The total amount due on the last bill rendered for the account.

##### **Total Balance Due**

The sum of Total Amount of Last Bill plus adjustments and payments applied.

#### **Detail of Current Charges:**

##### **Monthly Access Charges**

The sum of all non-usage sensitive access charge amounts, by Interstate, Intrastate and Local. This applies to Special Access/Interconnection and, in some cases, Switched Access/Interconnection.

##### **Monthly Access From/Thru Dates**

The from and thru dates associated with non-usage sensitive monthly access charges. These dates are applicable for Special Access/Interconnection and, in some cases, Switched Access/Interconnection. The from date should be less than or equal to the associated thru date.

### 3.2.1 Required Data Elements (Continued)

#### **Other Charges and Credits (OC&Cs)**

The sum of all current Other Charges and Credits (OC&C) amounts separated by state (Interstate, Intrastate), Major Trading Area (MTA) (InterMTA, IntraMTA) and Local .

#### **Primary Interexchange Carrier Charges (PICC) Charges**

The sum of all current PICC Charges by Interstate and Intrastate.

#### **Surcharges**

The sum of all surcharges or user fees.

#### **Taxes**

The sum of all current tax amounts. Amounts by taxing authority may be separately displayed beneath the tax total line when a Detail of Taxes section is not produced. When a mixture of Switched and Special Access/Interconnection taxes are billed on a facility access/interconnection bill, they must be grouped and displayed separately.

#### **Total Current Charges**

The sum of all current charges.

#### **Usage Charges**

The sum of all current Usage Charge amounts separated by state (Interstate, Intrastate), MTA (InterMTA, IntraMTA) and Local.

#### **Remittance:**

##### **Due By Date**

The date when payment of current charges is due.

##### **Remittance Name and Address**

The name and address to which payment is to be remitted. It is only provided if different from the Provider Name and Address. In a multiple check environment, the remit to name and address, remit to company code and total amount due for each company should be provided on the face page.

**3.2.1 Required Data Elements (Continued)**

**Total Amount Due**

The sum of all current charges and balance due amounts. In a multiple payment environment, this information should be provided for each company receiving a check.

**3.2.2 Additional Data Elements Required for Meet Point Billing**

**Meet Point Bill (MPB) Account Identifier**

If Meet Point is applicable, the phrase “Meet Point Bill” should only be printed on the Face Page of switched access/interconnection bills.

**Remit To Company Code**

This code represents other companies to whom payment is due in a single bill multiple tariff/multiple bill multiple tariff multiple check environment. (Refer to Section 2.3.1.)

**3.3. Producing Detailed Summary of Current Charges**

This page is required for paper bills when multiple states or multiple company codes within a state are reflected on the same bill. This section should be produced for each State/Area Specific Company Code.

**3.3.1 Required Data Elements**

**Detail of Current Charges:**

**Monthly Access Charges**

The sum of all non-usage sensitive access charge amounts, by Interstate, Intrastate and Local. This applies to Special Access/Interconnection and, in some cases, Switched Access/Interconnection.

**Monthly Recurring From/Thru Dates**

The from and thru date associated with non-usage sensitive Monthly Access Charges. These dates are applicable for Special Access/Interconnection and, in some cases, Switched Access/Interconnection. The from date should be less than or equal to the associated thru date.

### 3.3.1 Required Data Elements (Continued)

#### **Other Charges and Credits (OC&Cs)**

The sum of all current Other Charges and Credits (OC&C) amounts separated by state (Interstate, Intrastate), MTA (InterMTA, IntraMTA) and Local.

#### **Primary Interexchange Carrier Charges (PICC) Charges**

The sum of all current PICC Charges by Interstate and Intrastate.

#### **State/Area Specific Company Code**

The state/area specific company code identifies a company at the state/area level when that company provides access/interconnection service in more than one state/area. (Refer to section 2.3.1.2).

#### **State Identification**

The state from which charges were incurred (e.g., GA).

#### **Surcharges**

The sum of all surcharges or user fees.

#### **Taxes**

The sum of all current tax amounts. Amounts by taxing authority may be separately displayed beneath the tax total line when a Detail of Taxes section is not produced. When a mixture of Switched and Special Access/Interconnection taxes are billed on a facility access/interconnection bill, they must be grouped and displayed separately.

#### **Total Current Charges**

The sum of all current charges.

#### **Usage Charges**

The sum of all current Usage Charge amounts separated by state (Interstate, Intrastate), MTA (InterMTA, IntraMTA) and Local.

**3.4 Producing Detailed Summary of Jurisdictional Charges**

This page(s) is only applicable to a Switched Access/Interconnection paper bill when usage sensitive Switched Access/Interconnection charges are present, i.e.; no corresponding mechanized record is produced. A new section of the bill (Summary of Jurisdictional Charges) should be created to include a breakdown into Interstate and Intrastate. For non-Wireless Billing, Interstate should be further broken down into Interstate/InterLATA and Interstate/IntraLATA when the rating is different. For non-Wireless Billing, Intrastate should be further broken down into Intrastate/InterLATA and Intrastate/IntraLATA when the rating is different. For Wireless Billing, when rating is different, include a breakdown into Interstate/InterMTA, Intrastate/InterMTA and IntraMTA. This new section only needs to be created when more than one Interstate and/or Intrastate jurisdiction at the detail level roll up to the Interstate and/or Intrastate buckets on the Face Page of the bill.

**3.4.1 Required Data Elements****Adjustments Applied**

The summary of all Adjustments Applied by jurisdiction (i.e., Interstate/InterLATA, Interstate/IntraLATA, Intrastate/InterLATA, Intrastate/IntraLATA Local, Interstate/InterMTA, Intrastate/InterMTA and IntraMTA).

**Monthly Access Charges**

The summary of all Monthly Access/Interconnection Charges by jurisdiction (i.e., Interstate/InterLATA, Interstate/IntraLATA, Intrastate/InterLATA, Intrastate/IntraLATA, and Local).

**Monthly Access Charge From/Thru Dates**

The from and thru dates associated with the monthly Access charges.

**Other Charges and Credits (OC&Cs)**

The summary of all Other Charges and Credits by jurisdiction (i.e., Interstate/InterLATA, Interstate/IntraLATA, Intrastate/InterLATA, Intrastate/IntraLATA Local, Interstate/InterMTA, Intrastate/InterMTA and IntraMTA).

**Usage Charges**

The summary of all Usage Charges by jurisdiction (i.e., Interstate/InterLATA, Interstate/IntraLATA, Intrastate/InterLATA, Intrastate/IntraLATA Local, Interstate/InterMTA, Intrastate/InterMTA and IntraMTA).

**3.4.2 Additional Data Elements Required for Meet Point Billing****State/Area Specific Company Code**

The state/area specific company code identifies a company at the state/area level when that company provides access/interconnection service in more than one state/area. (Refer to section 2.3.1.2).

**3.6 Producing Detail Summary of Usage Charges**

This page(s) is only applicable to Switched Access/Interconnection, Local Resale, Unbundled Element and Wireless Billing paper bills when usage sensitive charges are present, i.e., no corresponding mechanized record is produced. This data will be presented by feature group, by state/provider, by jurisdiction, and by usage billing period. All usage rate elements and directionality displayed in the Detail of Usage Charges section will also be displayed.

The Usage Billing Cycle From and Thru Dates reflected on this page must match the Usage Billing Cycle From and Thru Dates reflected on the Detail of Usage Charges page(s).

**Jurisdiction**

The narrative description of the jurisdiction (i.e. Interstate/InterLATA, Interstate/IntraLATA, Intrastate/InterLATA, Intrastate/IntraLATA, Local, Interstate/InterMTA, Intrastate/InterMTA and IntraMTA).

**Quantity**

The number of minutes, calls, lines, queries, etc. to which a usage rate is being applied.

**Rate Element**

An identification of the usage charge being billed (e.g., Residual Interconnection Charge [RIC], Carrier Common Line, Tandem Switched Facility, Tandem Switched Termination, etc.) including directionality. Refer to the appropriate access/interconnection tariff for a complete list of elements.

**State Identification**

The state from which the usage charges were incurred (e.g., GA when multiple states are represented on the invoice).

**Usage Amount**

The dollar amount for a specific usage rate element.

### 3.10 Producing the Detail of Usage Charges

The Detail of Usage Charges section should be provided when usage charges are present. These detail amounts comprise the total usage charges amount as displayed on the Face Page of the bill.

This section should identify the end office for which the usage applies, the usage cycle being billed (from and thru dates), jurisdiction, Minutes of Use (MOUs), amount, rate, directionality (originating/terminating), Busy Hour Minutes Capacity (BHMC) quantity and type, mileage, and rate element, e.g., Residual Interconnection Charge (RIC), Tandem Switching, and Tandem Switched Facility. When RIC is being billed, information should be provided on a direct versus tandem basis. The switch or tandem that serves the customer's switch must also be identified to support the mileage measurement for the Local Transport Facility rates.

If usage is being billed out of its normal cycle, it should be identified and displayed separately from the current cycle. At minimum, this prior period usage should be reflected by bill cycle for the previous three cycles and bulked for any remaining cycle.

Consideration should also be given to tariffed rate differences associated with premium vs. non premium, time of day, traffic types, etc. When a rate change occurs, the from/thru dates for both the previous and new rates should be provided, along with the associated MOUs and amounts. If a BIP change occurs and is handled in the same manner as a rate change, the same data elements reflected for a rate change must also be reflected for the previous and new BIPs.

For non-Wireless Billing, Interstate should be further broken down into Interstate/InterLATA and Interstate/IntraLATA when the rating is different. For non-Wireless Billing, Intrastate should be further broken down into Intrastate/InterLATA and Intrastate/IntraLATA when the rating is different.

For Wireless Billing, when rating is different, usage should be broken down into Interstate/InterMTA, Intrastate/InterMTA and IntraMTA.

<b>V.</b>	<b>CONCLUSION .....</b>	<b>27</b>

**DIRECT TESTIMONY OF JOHN W. HABIAK**  
**ON BEHALF OF AT&T CORP.**

**I. INTRODUCTION**

**Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.**

A. My name is John (Jack) W. Habiak. My business address is 1 AT&T Way, 2A127, Bedminster, NJ 07921. I am a Director Financial Analysis for AT&T Corp.

**Q. WHAT ARE YOUR JOB RESPONSIBILITIES?**

A. I lead AT&T Corp.'s investigation and resolution of disputes involving switched access charges billed to AT&T Corp., including disputes that may involve arrangements by carriers to inflate access charges billed to AT&T Corp. My responsibilities include the coordination of data collection and analysis, the review of switched access bills, and the support of policy and litigation efforts. I also participate in the Interstate Regulatory Team, which includes analysis of regulatory filings and support of policy development. In addition, I lead the Global Connectivity Billing Integrity Project for Switched Access.

**Q. PLEASE DESCRIBE YOUR EMPLOYMENT EXPERIENCE AND EDUCATION.**

A. I have worked for AT&T Corp. and affiliated companies for over 29 years, primarily in the Access Management organization. I also have experience in Network Engineering. My previous positions include:

District Manager – Interstate Access Budget and Regulatory

Manager – Local Issues and Local Connectivity Costs

Manager – Business to Business Access Team Leader

Manager – Access Tariff Issues Management and Analysis

Supervisor – Intrastate Access Budget

Supervisor – Network Engineering Cost Model Tool Development and EDP

Before joining AT&T, I earned a Bachelor of Science degree in Natural Resource Management from Rutgers University. I have a comprehensive science teaching certificate for the state of New Jersey.

**Q. WHAT IS THE PURPOSE OF THIS DIRECT TESTIMONY?**

A. The purpose of my testimony is to explain why the intrastate switched access charges assessed by the Complainants – Westphalia Telephone Company (“WTC”) and Great Lakes Comnet, Inc. (“GLC”) – are excessive and unreasonable, and to provide an accounting of the refund amounts the Complainants owe to AT&T Corp. I first describe the parties and their relationships, and the “switched access” services that Complainants provide to AT&T Corp. Next, I show how Complainants route switched access traffic to AT&T Corp. I then explain how Complainants overcharged AT&T Corp., by (i) charging for intrastate switched access service at unreasonably high rates, (ii) unreasonably stimulating access traffic and (iii) unreasonably inflating their transport mileage and other charges. Finally, I determine the refund amounts due to AT&T Corp.

**Q. DO YOU HAVE ANY SUPPORTING SCHEDULES?**

A. Yes, I have attached 8 supporting schedules:

Schedule JH-1 – Switched Access Call Flow Diagram

Schedule JH-2 – Increase in Complainants’ Access Billing

Schedule JH-3 – 8YY Call Flow Diagram

Schedule JH-4 – March 2013 Dispute Letter

Schedule JH-5 – Informal FCC complaint filed by AT&T Corp.

Schedule JH-6 – Informal FCC complaint filed by Verizon, Sprint and CenturyLink

Schedule JH-7 – Comparison of Per-Minute Switched Access Rates

Schedule JH-8 – Calculation of Refund Owed to AT&T Corp.

## **II. BACKGROUND**

### **A. THE PARTIES**

#### **Q. PLEASE TELL US BRIEFLY ABOUT THE PARTIES TO THIS CASE.**

A. AT&T Corp. is the Respondent in this case. To be clear, this is AT&T Corp., the legacy AT&T entity that provided long-distance service before it merged with SBC in late 2005. AT&T Corp.’s affiliate Michigan Bell Telephone Company d/b/a AT&T Michigan (“AT&T Michigan”) is not a party in this case.

AT&T Corp. is registered with the Commission as an interexchange carrier (“IXC”) and provides end users the ability to make interexchange or long-distance calls, *i.e.* calls between local exchanges. AT&T Corp. also provides 8YY toll-free service to end users across the country, generally mid-size businesses. 8YY is a unique service because it is the customer *receiving* the call (rather than the customer *making* the call) that pays for the call. It is generally purchased by businesses that want to make it cheap and easy for their

customers to call them. AT&T Corp.'s 8YY customers are the businesses that receive the 8YY calls.

There are two Complainants. Respondent WTC is an incumbent local exchange carrier ("incumbent LEC") that provides telecommunications exchange and exchange access services to business and residential customers in Michigan. Its main switch is located in Westphalia, Michigan, and as of 2011 it provided roughly 964 basic local exchange access lines in that exchange.

Respondent GLC has registered with the Commission as a provider of exchange access services. GLC is owned by a consortium of LECs, including Ace Telephone Company of Michigan and Bloomingdale Telephone Company. GLC is the owner of WTC. More specifically, WTC is owned by Clinton County Telephone Company, and in September, 2011, Clinton County Telephone Company became a subsidiary of GLC.

**B. SWITCHED ACCESS CHARGES**

**Q. PLEASE EXPLAIN WHAT SWITCHED ACCESS CHARGES ARE.**

A. Generally speaking, switched access charges are the fees that a local exchange carrier ("LEC") assesses upon wireline long distance providers when the LEC originates or terminates long distance calls made or received by the LEC's end users. The LEC owns the "loop" that connects those end users to the LEC's switch and the rest of the public switched telephone network. LECs typically assess switched access charges for "originating" and terminating" long-distance calls. For example, let's say that an end

93 user in Westphalia buys long-distance service from AT&T Corp. and makes a long-  
94 distance call to a friend in Saginaw. In that case, AT&T Corp. picks up the call from the  
95 originating LEC in Westphalia and takes it to the LEC that serves the called party in  
96 Saginaw. The Saginaw LEC would in turn deliver the call to the called party. The  
97 Westphalia LEC that served the party making the call would typically assess an  
98 “originating” switched access charge on AT&T Corp., while the Saginaw LEC that  
99 served the party receiving the call would typically assess a “terminating” switched access  
100 charge on AT&T Corp. Schedule JH-1 provides a high-level illustration of switched  
101 access services.

102  
103 **Q. WHAT FUNCTIONS DOES A LEC PERFORM WHEN IT PROVIDES**  
104 **ORIGINATING SWITCHED ACCESS SERVICE?**

105 A. When an end user places an interexchange call (either an intrastate or interstate call) from  
106 a wireline phone, the call travels from the calling party’s location over a loop provided by  
107 the LEC that serves that caller, to that LEC’s local serving office (sometimes called an  
108 “end office” or “central office”). There, the LEC’s local switch electronically routes the  
109 call along a wired path known as a transport trunk to the interexchange carrier’s point of  
110 presence (“POP”). Depending on the relevant network architecture, the call may or may  
111 not go through an intermediate switch known as a “tandem” switch. At the POP, the  
112 LEC hands the call off to the interexchange carrier and the originating access service  
113 ends. This call flow scenario is shown in Schedule JH-1.

115 **Q. WHAT FUNCTIONS DOES A LEC PERFORM WHEN IT PROVIDES**  
116 **TERMINATING SWITCHED ACCESS SERVICE?**

117 A. The LEC at the receiving end of the call performs the same basic functions as the LEC at  
118 the originating end, only in reverse order. Instead of taking the call from the end user  
119 placing the call to the IXC's POP, the terminating LEC takes the call from the IXC's  
120 POP to the end user receiving the call. This call flow is also shown on Schedule JH-1.

121  
122 **Q. HOW ARE SWITCHED ACCESS CHARGES CALCULATED?**

123 A. At both the originating and terminating ends, the LEC charges for various "rate elements"  
124 that correspond to the features and functions provided and the facilities used in carrying a  
125 particular call. At a high level, these rate elements include (i) switching at the end office,  
126 (ii) switching and multiplexing at a tandem office (if the call goes through a tandem), and  
127 (iii) transport between the end office and the IXC's POP. These rate elements are  
128 generally expressed as per-minute charges for each minute of the call's duration.  
129 Transport charges can also vary based on the length or "mileage" of transport facilities  
130 used for carrying the call.

131  
132 **Q. HOW ARE SWITCHED ACCESS CHARGES REGULATED?**

133 A. For intrastate calls, like the long-distance call between Westphalia and Saginaw in my  
134 example above, switched access charges are subject to some regulation by this  
135 Commission. If the end user in Westphalia calls someone in Chicago, the call is an  
136 interstate call and the associated access charges are regulated by the Federal  
137 Communications Commission ("FCC"). My understanding, however, is that in Michigan

(like many states) a LEC's switched access rates for *intrastate* calls "mirror" the corresponding rates for *interstate* calls.

**Q. DOES AT&T CORP. DECIDE WHICH LEC WILL "ORIGINATE" OR "TERMINATE" ANY LONG-DISTANCE CALL?**

A. No, not at all. AT&T Corp. does not decide which end users call its long-distance or 8YY customers, nor does it decide which calls its long-distance customers make. The end users make that choice. And obviously, AT&T Corp. does not decide where those end users live, or which carrier those end users select to provide their phone service and originate or terminate their calls. Once a LEC delivers a call from a customer served by AT&T Corp., AT&T Corp. has no choice but to accept and carry the call, and no choice but to hand that call off to the terminating LEC that serves the called party. AT&T Corp. cannot block calls coming from or going to a particular LEC, even if that LEC's access charges do not comply with the law.

AT&T Corp. also does not decide which intermediate tandem providers (if any) will handle traffic to and from a particular LEC and deliver it to AT&T Corp. On the contrary, the LEC decides which tandem provider it will use.

**Q. AT THE BEGINNING OF YOUR TESTIMONY, YOU MENTIONED THAT YOUR RESPONSIBILITIES INCLUDE THE INVESTIGATION OF ARRANGEMENTS DESIGNED TO INFLATE ACCESS CHARGES. COULD YOU EXPLAIN FURTHER?**

161

162 A. There are numerous ways in which access providers have inflated their bills to carriers  
163 like AT&T Corp. In the industry, this practice is known generally as “access arbitrage”  
164 or simply “arbitrage.” Arbitrage stems from the unusual nature of switched access  
165 service. As I explained above, the IXC that “buys” and pays for the service typically  
166 does not choose which carrier provides the service, and cannot refuse calls coming from  
167 or going to its customers.

168

169 Generically speaking, arbitrage refers to any arrangement that is designed to generate or  
170 increase access charges for the LEC rather than actually serving any business or  
171 economic purpose for the IXC or the end user. So, for example, if a LEC’s switched  
172 access rate for intrastate calls is higher than the corresponding rate for interstate calls, the  
173 LEC has an incentive to mis-identify interstate traffic as intrastate so it can charge the  
174 higher rate. That is one reason why Michigan, like many other states, requires LECs’  
175 intrastate rates to be equal to or less than the corresponding interstate rates.

176

177 **III. THE PARTIES’ DISPUTE**

178 **Q. WHAT IS THE DISPUTE BETWEEN THE PARTIES?**

179 A. The main dispute between the parties relates to the unreasonably high switched access  
180 rates that GLC and WTC seek to impose. Their switched access rates are very high.  
181 They correspond to rates one might see for traffic that is originated by end users in  
182 remote, rural areas of Michigan. The problem is that most of Complainants’ traffic has  
183 nothing to do with rural Michigan.

184

185 First, most of the originating switched access traffic comes from competitive local  
186 exchange carriers (“CLECs”) that serve dense urban or suburban areas. GLC picks up  
187 the traffic in Southfield, transports the traffic a great distance, and then delivers that  
188 traffic to AT&T Corp. Before 2014, the vast majority of the CLEC traffic came from  
189 Local Exchange Carriers of Michigan (“LECMI”) in Southfield, Michigan; GLC  
190 transported the traffic 83 miles to Westphalia, and delivered it to AT&T Corp. in Grand  
191 Rapids.

192

193 Second, most of Complainants’ terminating switched access traffic is bound for LECMI,  
194 a non-rural CLEC. AT&T Corp. delivers the traffic to GLC in Westphalia, and GLC  
195 takes the traffic 83 miles to Southfield. At that point, GLC hands the call off to LECMI.

196

197 **Q. WHY DOES AT&T CORP. DISPUTE GLC’S CHARGES FOR SUCH TRAFFIC?**

198 A. GLC’s application of high rural rates to non-rural CLEC traffic is an unreasonable  
199 attempt to get around the rules and inflate access charges. CLECs are subject to FCC  
200 rules that “cap” their switched access rates at the level of the incumbent LEC that is their  
201 primary competitor. For non-rural CLECs in Michigan, like LECMI, the incumbent LEC  
202 for comparison is AT&T Michigan. Thus, if LECMI originates a long-distance call in  
203 Southfield that is bound for AT&T Corp., LECMI should charge its non-rural rate for  
204 originating the call (which has to be equal to or less than the corresponding AT&T  
205 Michigan rate) and deliver it to the closest logical tandem: the AT&T Michigan tandem

in West Bloomfield (7 miles away from Southfield). Instead, GLC picks up the call in Southfield and charges its own high rates for carrying the call to AT&T Corp.

This is doubly improper. GLC is carrying non-rural CLEC traffic, which should be capped at the AT&T Michigan rate. Further, GLC is also a CLEC for purposes of the FCC's rule, so its rates for non-rural Michigan traffic should be also capped at the AT&T Michigan rate. To make matters even worse, GLC charges for 83 miles of transport that AT&T Corp. doesn't need, for GLC to transport the call all the way from Southfield, Michigan to distant Westphalia.

**Q. HOW DID AT&T CORP. FIND OUT THAT COMPLAINANTS HAVE BEEN CHARGING HIGH RURAL RATES FOR NON-RURAL TRAFFIC?**

A. The issue came to AT&T Corp.'s attention as a result of sharp increases in the volume of access minutes that Complainants billed to AT&T Corp. Those volume increases occurred when Complainants artificially stimulated their access volumes by carrying 8YY traffic that did not originate with their own end users, and that was instead originated by end users of wireless carriers and then passed through non-rural CLECs.

Schedule JH-2 shows Complainants' switched access minutes billed to AT&T Corp. from January 2010 through July 2014, and graphically illustrates the increase in volume over time. As you can see from Schedule JH-2, Complainants' switched access billings for the month of September 2011 were over four times higher than the corresponding monthly billings for January 2010. Nearly all of that fourfold increase relates to charges for

229 originating switched access. As you can see, in January 2010, Complainants billed  
230 slightly more for terminating access than originating access; by September 2011,  
231 Complainants' originating switched access charges were roughly three times the  
232 corresponding charges for terminating switched access.

233  
234 **Q. PLEASE TELL US MORE ABOUT COMPLAINANTS' AGGREGATION OF**  
235 **WIRELESS 8YY TRAFFIC.**

236 A. As with the non-rural CLEC traffic I discussed above, Complainants are trying to get  
237 around the rules. Unlike wireline LECs, wireless carriers cannot charge for switched  
238 access service themselves. In recent years, some wireless carriers have sent 8YY traffic  
239 to "traffic aggregators" who in turn send it to wireline LECs and other access providers  
240 that *can* and do charge for switched access services. Hypercube and Inteliquent  
241 (formerly Neutral Tandem) are two prominent examples in the industry of access  
242 providers that aggregate 8YY traffic. They may provide tandem switching and some  
243 transport, and then hand off the traffic to the carriers that actually provide 8YY service,  
244 like AT&T Corp. The access providers/call aggregators then charge AT&T Corp. for  
245 originating switched access services. Based on my experience in the industry, I am aware  
246 that the access providers will share the access revenues with the wireless carriers whose  
247 end users actually originate the traffic (or otherwise compensate them), as an incentive  
248 for them to join the aggregation arrangement.

249  
250 Like Hypercube and Inteliquent, Complainants here have increased their access volume  
251 by handling aggregated wireless 8YY traffic and assessing originating switched access

charges on 8YY providers. The difference is that Hypercube and Inteliquent charge rates on this 8YY traffic that comply with federal law, while Complainants improperly bill for the traffic at unlawfully high rates.

**Q. COULD YOU PLEASE SHOW US HOW COMPLAINANTS ARE INVOLVED IN CARRYING WIRELESS-ORIGINATED 8YY CALLS?**

A. Yes. Based on my analysis of Complainants' bills, my understanding of the industry and its key players, and my review of Complainants' pleadings in the FCC informal complaint proceeding, the 8YY traffic in dispute follows a complicated, circuitous path. Schedule JH-3 to my testimony provides a graphic illustration. The steps are as follows:

1. An end user who buys wireless service makes an 8YY call to a business served by AT&T Corp.
2. The end user's wireless carrier routes the call to a traffic aggregator (in this case, Incomm, as I discuss further below).
3. Incomm routes the call to one or more intermediate carriers that, at GLC's direction, take the call to LECMI in Southfield.
4. LECMI receives the 8YY aggregated traffic in Southfield and hands it off to GLC there.
5. GLC then transports the call from Southfield to Westphalia (where its tandem switch is located), and charges AT&T Corp. for 83 miles of switched access transport service.
6. GLC hands the call off to WTC in the Westphalia exchange where GLC's tandem switch is located.

# PUBLIC VERSION

MPSC Case No. U-17619  
AT&T Corp. Ex. 1.0 Habiak  
Page 13

7. WTC carries the aggregated 8YY traffic from the exchange boundary of the Westphalia exchange to GLC's tandem switch. This distance is less than 1 mile.
8. GLC (or some related company) performs an 8YY database dip to identify the carrier providing the 8YY service on that particular call (*e.g.*, AT&T Corp.), and GLC's switch directs the call to that carrier.
9. For calls going to AT&T Corp. end users, AT&T Corp. accepts the call at the Westphalia tandem and transports the call to its "point of presence" in Grand Rapids over dedicated transport facilities leased from GLC between Westphalia and Grand Rapids.
10. In Grand Rapids, the call enters AT&T Corp.'s network and is transported to locations across the country for termination to the 8YY toll-free customer.

**Q. WHAT ACCESS CHARGES DO COMPLAINANTS ASSESS ON AT&T CORP. FOR THIS CIRCUITOUS ARRANGEMENT?**

- A. Complainants are charging AT&T Corp. for the following services, at the following rates, that are allegedly performed by the following carriers (database query charges not included):

CARRIER	ACCESS FUNCTION BILLED	RATE
WTC	Tandem Switched Facility	\$ 0.000418 per mile (for 1 mile)
GLC	Tandem Switched Facility	\$ 0.000418 per mile (for 82 miles)
GLC	Tandem Switched Termination Transport	\$ 0.002171
GLC	Tandem Switching	\$ 0.005476

293 Until early 2013, almost all of the disputed charges were billed by WTC, although as I  
294 discuss below it appears that WTC's bills included charges for services that may have  
295 been provided by GLC. I discuss the problems with these charges in more detail in  
296 Sections III.A-III.B below. I then calculate the overall dollar impact of Complainants'  
297 improper practices, and the refunds requested by AT&T Corp., in Section IV below.

298  
299 **Q. WHICH WIRELESS CARRIERS ARE ORIGINATING THESE CALLS?**

300 A. Until March 2014, Cricket Wireless was the main originating wireless carrier. In March,  
301 2014, Cricket was acquired by AT&T Corp.'s parent company, AT&T Inc., and the flow  
302 of wireless 8YY traffic from Cricket through Complainants ceased. As you can see from  
303 Schedule JH-2, Complainants' switched access billings to AT&T Corp. dropped sharply  
304 in March, 2014.

305  
306 **Q. DID THE DROP IN WIRELESS 8YY TRAFFIC SOLVE THE PROBLEM?**

307 A. No. As I described above, the 8YY traffic was only part of the problem. It caused  
308 increases in volume that brought the issue to AT&T Corp.'s attention. But the underlying  
309 issue is Complainants' application of high, rural rates (and very large transport charges)  
310 to non-rural CLEC traffic. That practice began before the aggregation of Cricket 8YY  
311 traffic, and it has continued even after Complainants' aggregation of Cricket 8YY traffic  
312 ceased.

313  
314 Further, almost immediately after the aggregation of Cricket traffic stopped in March  
315 2014, Complainants began billing AT&T Corp. for a significant amount of new traffic.

Based on Complainants' bills, it appears that the traffic comes from a Chicago switch assigned to a competitive LEC called "Peerless" that operates in Michigan and Illinois. Complainants' bills for the Peerless traffic include charges for GLC's tandem switch in Westphalia, and state that GLC delivers the traffic to AT&T Corp. in Grand Rapids. GLC's switched access charges for the Peerless traffic, however, do *not* include any transport charges; they consist only of tandem switching charges, albeit at excessive rates. The ultimate source of the Peerless traffic may be a wireless carrier or carriers. Of course, AT&T Corp. is on the outside of Complainants' arrangement looking in, so we do not know the full scope of the arrangement or all the participants. We hope to learn more of the facts through discovery. But one thing we do know is that no matter where the Peerless traffic comes from, GLC should not be charging AT&T Corp. for non-rural traffic from Chicago at high rates that would only be appropriate, if ever, for rural Michigan.

**Q. WHO IS "AGGREGATING" THE TRAFFIC FROM WIRELESS CARRIERS AND DELIVERING IT TO COMPLAINANTS?**

A. Based on our investigation to date, it appears that a company called InComm (or its affiliate, U.S. South, Communications, Inc.) is the principal carrier "aggregating" the traffic. InComm is based in Atlanta, Georgia, and it provides prepaid product and transaction services. See <http://www.incomm.com/> and <http://www.us-south.net/>. However, it appears that InComm does not send traffic directly to Complainants and does not deal with them directly. Rather, it sends the 8YY traffic to one or more intermediate carriers, and at some point the intermediaries hand off the traffic to Complainants. I am

not yet sure who those intermediaries are. Again, AT&T Corp. needs discovery to learn the full details of Complainants' traffic stimulation arrangements.

**Q. ARE THE WIRELESS CARRIERS, OR THE AGGREGATORS, SHARING IN COMPLAINANTS' ACCESS CHARGES?**

A. Based on my experience in the industry, I am aware that the LECs billing access charges in these arrangements often enter into agreements to pay the traffic aggregators for the traffic and thereby share the LECs' access revenues. The aggregators, in turn, pay the wireless carriers whose end users originate the traffic. These payments clearly provide the incentive for the wireless carriers and aggregators to participate in this arrangement. With respect to the traffic originated by Cricket, Cricket was paid by InComm for the 8YY traffic, and InComm in turn was paid by one or more of the intermediate carriers that deal with Complainants. It stands to reason that those intermediaries would in turn have been paid by Complainants. But again, at this stage, we do not know all the details of Complainants' arrangement. We intend to take discovery from Complainants so that they divulge all the contracts or informal agreements that are related to their arrangements.

**Q. WHEN DID AT&T CORP. FIRST REFUSE TO PAY A PORTION OF COMPLAINANTS' BILLS?**

A. AT&T Corp. began to withhold a portion of Complainants' bills (reflecting the improper charges for non-rural CLEC traffic, wireless 8YY traffic, and excessive mileage) beginning with their bills for February 2013 usage. AT&T Corp. concurrently raised

these issues with Complainants in a March, 2013 dispute letter to WTC and GLC. I attach a copy of that letter as Schedule JH-4.

However, Complainants were issuing improper bills for some time before AT&T Corp. discovered the problem in early 2013. AT&T Corp. contests Complainants' bills going back to February 2010. As Schedule JH-2 shows, Complainants' switched access volumes began to increase then, but it took more time for the full increase to be realized. It took some time after that for AT&T Corp. to realize that Complainants' billing increases were the result of improper rates, mileage, and aggregation practices, rather than normal business expansion or fluctuations in volume. In part, this is because AT&T Corp. operates nationwide and has to review and assess switched access charges from a large number of companies. Thus, between February 2010 and February 2013, AT&T Corp. paid Complainants' bills, without realizing that a substantial portion of those bills was improper. AT&T Corp. accordingly seeks a refund of the excessive charges it paid between February 2010 and February 2013.

**Q. WHAT OTHER PROCEEDINGS ARE CURRENTLY PENDING ON THIS DISPUTE?**

A. Overall, a substantial majority of the disputed charges relate to interstate calls. Accordingly, AT&T Corp. filed an informal complaint against Complainants with the FCC in April 2014, seeking (i) a refund of improper charges that AT&T Corp. paid and (ii) an order directing Complainants to stop improper billing going forward. A copy of that complaint is attached as Schedule JH-5 hereto. Several other leading IXCs –

Verizon, Sprint, and CenturyLink – have also brought their own informal complaint at the FCC complaining about Complainants’ charges for the same reason. I attach a copy of their FCC complaint as Schedule JH-6 hereto. Because most of the traffic at issue is interstate traffic, and because Michigan access rates mirror federal access rates, AT&T Corp. is asking the Commission to defer proceedings on the intrastate portion of the parties’ dispute until the FCC rules on the interstate side.

In addition, there is a new MPSC proceeding that addresses this same dispute. In MPSC Case No. U-17660, GLC and WTC allege that three other IXC’s have objected to paying their switched access rates. These IXC’s are Level 3 Communications, Global Crossing Local Services, Inc, and Wiltel Communications.

**A. GLC’S ACCESS RATES ARE EXCESSIVE AND UNREASONABLE**

**Q. GLC AND WTC CLAIM THAT AT&T CORP. OWES THEM FOR SWITCHED ACCESS CHARGES ASSESSED SINCE FEBRUARY 2013. HOW DO YOU RESPOND?**

A. AT&T Corp. does not owe Complainants anything. It has already paid more than the appropriate amount of their bills. The remaining amounts claimed by Complainants are based on their unreasonably high rates, including inappropriate transport mileage charges. In reality, Complainants owe AT&T Corp. a substantial amount as a refund of improper charges that AT&T paid *before* February, 2013, when AT&T began to refuse payment on a portion of Complainants’ billings. Further, Complainants likely owe AT&T Corp. an additional refund for the period *after* February 2013, because the amount that AT&T

Corp. withheld after February 2013 was based on conservative assumptions that understated the amount due to AT&T Corp. Further investigation will assist AT&T Corp. in showing that additional amounts are due.

**Q. WHY DOES AT&T CORP. DISPUTE GLC's CHARGES?**

A. GLC's access rates are excessive and unreasonable. This is because they greatly exceed the rates charged by the incumbent LEC with which GLC competes: AT&T Michigan. GLC's intrastate switched access rates are higher than the corresponding per-minute rates that would be charged by AT&T Michigan for the same access service – by a multiple of more than 30 times.

**Q. WHY DO YOU COMPARE GLC's RATES TO THOSE OF AT&T MICHIGAN?**

A. AT&T Corp. explains the relevant legal rules in its Counterclaims. Briefly, Michigan law requires a carrier's intrastate switched access rates to be equal to or less than its corresponding interstate rates, and in turn federal law "caps" a CLEC's interstate switched access rates at the levels charged by the incumbent LEC with which that carrier competes. GLC is a CLEC for purposes of the federal rules. Further, it is carrying traffic originated by non-rural CLECs like LECMI that are also subject to the federal caps.

In addition, federal law has rules governing the artificial stimulation of access volumes. Those rules also use an incumbent LEC's rates as a "cap" on a competing carrier's interstate switched access rates if traffic volume increases by levels specified by the FCC. Because Complainants have artificially inflated their traffic volumes, the access

stimulation rules provide an independent reason for capping Complainants' rates at the levels of the relevant incumbent LEC.

Finally, federal law also prevents carriers from imposing excessive mileage charges through arrangements that are designed to inflate a LEC's transport mileage and that do not provide some corresponding benefit to the IXC or to callers.

**Q. WHAT IS THE FACTUAL BASIS FOR AT&T CORP.'S POSITION THAT GLC HAS ENGAGED IN ACCESS STIMULATION?**

A. My understanding is that the FCC's rule has two triggers, and if a carrier meets either one it is presumed to be subject to the FCC's rule on access stimulation. One of these is that a LEC has "has had more than a 100 percent growth in interstate originating and/or terminating switched access minutes of use in a month compared to the same month in the preceding year." 47 C.F.R. § 61.3(bbb)(1)(ii). Complainants satisfy this condition. As I explained above, AT&T Corp.'s records show that the volumes of traffic coming through the LECMI switch in Southfield, Michigan increased dramatically over time. This interstate data is attached as Exhibit B to AT&T Corp.'s informal FCC complaint, Schedule JH-5. Since the end of 2011, when the FCC's access stimulation rules became effective, the volume of interstate access minutes of use between AT&T Corp. and this switch increased by 170 percent between May, 2011 (7.46 million MOUs) and May, 2012 (20.13 million MOUs); it increased by 123 percent between June, 2011 (8.63 million MOUs) and June, 2012 (19.20 million MOUs). Both these increases are enough to satisfy the FCC's volume trigger.

454

455 **Q. WHY DOES AT&T CORP. BELIEVE THAT, IN ADDITION TO**  
456 **ARTIFICIALLY STIMULATING TRAFFIC VOLUME, GLC IS CHARGING**  
457 **FOR EXCESSIVE TRANSPORT MILEAGE?**

458 A. This is self-evident from the circuitous nature of GLC's routing arrangement. Instead of  
459 receiving the calls at a point somewhere near an AT&T Corp. point of presence ("POP"),  
460 and then delivering them to AT&T Corp. somewhere close by, GLC picks up CLEC and  
461 wireless 8YY traffic from the LECMI switch in Southfield and transports that traffic over  
462 83 miles to Westphalia. There, GLC hands the calls to WTC, which transports them to  
463 GLC's tandem in Westphalia. Under this arrangement, GLC assesses transport charges  
464 based on 83 miles of transport service. It is as if you wanted to fly from Chicago to  
465 Lansing and take a taxi from the airport to your home in Lansing, but were instead forced  
466 to fly into Detroit Metro airport, pick up a taxi there, and ride all the way to your house in  
467 Lansing so the taxi service can maximize its charges.

468

469 **Q. DOES GLC's CIRCUITOUS ROUTING ARRANGEMENT RESULT IN ANY**  
470 **BENEFITS TO AT&T CORP.?**

471 A. None whatsoever. As I stated earlier, the CLEC and 8YY traffic have no particular  
472 connection to Complainants or rural Michigan. The traffic originated by the CLECs is  
473 originated in non-rural Michigan, and AT&T Corp. could easily pick up the traffic from  
474 AT&T Michigan's tandem switches in non-rural Michigan. The wireless 8YY traffic is  
475 even further afield, originated by end users of wireless carriers at locations all over the  
476 country. AT&T Corp. has numerous POPs, throughout the United States, where it could

pick up the wireless traffic. Many of those POPs are located much closer to LEC end offices and tandem offices, so the transport mileage would be much shorter than 80 miles, and in many cases less than 1 mile. Many of those POPs are also located in areas served by LECs with access rates that are much lower than GLC's and WTC's rates. If Complainants had not entered into this artificial aggregation and routing arrangement, AT&T Corp. would have simply picked up the same traffic from another switched access provider at a much lower rate. AT&T Corp., the calling party, and the 8YY customer do not receive any benefit from Complainants' routing.

Further, Complainants' arrangement did not result in any overall increase in AT&T Corp.'s 8YY traffic, so it does not result in any increase in 8YY revenue. The end users making the 8YY calls are simply trying to call the 8YY business customer, and would not know or care about the intermediate arrangements involving wireless carriers, aggregators and Complainants in between them and their desired destination. Thus, they would make the same 8YY calls whether or not Complainants inserted themselves into the call flow. From AT&T Corp.'s perspective, Complainants' routing arrangement has only one effect – to artificially drive up access costs. It provides no benefits to AT&T Corp., and is in fact a detriment.

**Q. CONSIDERING GLC'S RATE STRUCTURE AND ITS ARTIFICIAL STIMULATION OF ACCESS MINUTES AND TRANSPORT MILEAGE, HOW DO GLC'S ACCESS RATES COMPARE TO THOSE OF AT&T MICHIGAN?**

499 A. GLC's overall per-minute rates for originating switched access service are some 30 times  
500 the per-minute rates that AT&T Michigan would charge for the same service. Looking at  
501 the transport element alone, GLC's inefficient 83-mile runaround results in per-minute  
502 transport charges that are over 300 times the per-minute rate AT&T Michigan would  
503 charge for transport (based on the 7-mile distance between the LECMI switch in  
504 Southfield and the AT&T Michigan switch in West Bloomfield). I provide a detailed  
505 comparison of GLC's rates versus AT&T Michigan's rates at Schedule JH-7.

506  
507 **B. WTC'S TRANSPORT CHARGES VIOLATE ITS TARIFF**

508 **Q. WHAT IS AT&T CORP.'S BASIS FOR DISPUTING WTC'S ACCESS**  
509 **CHARGES?**

510 A. WTC has billed AT&T Corp. for 83 miles of transport facilities. Complainants have not  
511 been clear as to who actually provided the 83 miles of transport. The bills submitted by  
512 WTC before May 2013 indicate that WTC provided the service. It is also possible that  
513 WTC may have billed AT&T for transport service that was actually provided by GLC.  
514 But as I explained in Section III.A above, GLC cannot properly charge for 83 miles of  
515 transport, because GLC inefficiently routed the traffic in a roundabout manner to inflate  
516 its mileage charges. GLC's use of WTC as a billing agent is irrelevant. Whichever  
517 company put its name on the bills, GLC's charges were improper.

518  
519 To the extent WTC provided the transport itself, its charges would still be unlawful.  
520 WTC has adopted the tariff issued by the National Exchange Carriers Association, and  
521 the NECA allows it to collect transport charges only for transport within its Local Access

Transport Area (“LATA”). The title page of the NECA tariff expressly limits the area in which the access service (including transport) may be provided, stating that the tariff governs “the provision of Access Services *within a Local Access and Transport Area (LATA) or equivalent Market Area.*”<sup>1</sup> Further, Section 6.1 of the tariff states that “Switched Access Service provides for the ability to originate calls from an end user’s premises to a customer designated premises, and to terminate calls from a customer designated premises to an end user’s premises *in the LATA where it is provided.*” The transport service disputed by AT&T Corp. runs between Southfield and Westphalia. Southfield is in LATA 340, whereas Westphalia is in LATA 344. Therefore, transport between these two points is an interLATA service that is not covered by WTC’s tariff.

**Q. WHY DO YOU SAY THAT THE TRANSPORT SERVICE MAY ACTUALLY HAVE BEEN PROVIDED BY GLC RATHER THAN WTC?**

A. AT&T Corp. complained about WTC’s billings in early 2013, and reminded WTC that it could not charge for interLATA transport. Starting in May 2013, WTC’s bills said that the 83 miles of transport facilities were being billed on behalf of GLC. It is possible that the transport charges were billed on GLC’s behalf all along, and WTC just started telling us so in May 2013. It is also possible that the transport charges were really billed on behalf of WTC itself, and that WTC tried to “shift” the charges to GLC on its bills because it realized that WTC could not lawfully bill for interLATA transport. In the end,

---

<sup>1</sup> NECA Tariff, FCC No. 5, Original Title Page 1, Access Service (emphasis added).

it doesn't matter because neither GLC nor WTC could lawfully bill for these excessive transport charges.

**IV. DETERMINATION OF REFUND AMOUNT REQUIRED**

**Q. HAVE YOU CALCULATED THE REFUND AMOUNTS THAT COMPLAINANTS OWE TO AT&T CORP.?**

A. Yes. The amount of the refund that AT&T Corp. seeks is \$3,683,025. Schedule JH-8 show the detailed calculation of that refund. As you can see, at this point all of the refund is assigned to WTC, because the overbillings all came from WTC and all the payments were from AT&T Corp. to WTC.

**Q. PLEASE EXPLAIN YOUR STARTING POINT FOR DETERMINING THESE AMOUNTS.**

A. I started by reviewing Complainants' access bills covering usage from February 2010 through January 2013 (the latest bill before AT&T Corp. began to withhold the unlawful portion of the amounts billed). As I discussed earlier, the bills came from WTC, and those billed stated that WTC was the provider of the service, and AT&T Corp. paid WTC alone. If it turns out that GLC provided the service that was billed by WTC, then GLC would be responsible for the refund. AT&T Corp. is indifferent to which affiliate pays the refund, so long as it is compensated.

**Q. PLEASE EXPLAIN HOW YOU DETERMINED THE REFUND AMOUNT DUE.**

564 A. As I described above, the central problems with Complainants' charges are (i) they are  
565 based on excessive, unreasonable per-minute rates that should have been "capped" at the  
566 level of AT&T Michigan's rates, and (ii) they include excessive transport mileage  
567 charges that reflect Complainants' inefficient routing scheme. To correct these problems,  
568 I took the originating access minutes and reduced the per-minute rates used in the bills to  
569 the levels that Complainants should have charged: AT&T Michigan's per-minute rates.  
570 Similarly, for the transport mileage portion of these charges, I replaced GLC/WTC's  
571 excessive 83 miles of transport facilities (from the LECMI switch in Southfield to the  
572 GLC tandem in Westphalia) with a mileage charge based on 7 miles of transport  
573 facilities. The latter represents the mileage AT&T Michigan would have used for  
574 transporting calls from the LECMI switch in Southfield to the AT&T Michigan tandem  
575 in West Bloomfield. By comparing the amounts WTC should have charged (using  
576 AT&T Michigan's rates and transport mileage) to the amounts on the bills, I determined  
577 the total amount by which WTC overcharged AT&T Corp. through January 2013.

578  
579 **Q. IS THERE ANY REFUND DUE TO AT&T CORP. FOR CHARGES AFTER**  
580 **JANUARY 2013?**

581 A. I expect there is. Beginning with February 2013 usage, AT&T Corp. started disputing  
582 and withholding part of Complainants' bills. However, the amount withheld was based  
583 on a preliminary and very conservative (understated) view of the amount due. Thus, it is  
584 likely that further investigation will show additional amounts due to AT&T Corp. for the  
585 period after January 2013.

RE: Access Billing to AT&T

Dear Mr. Lodden, Mr. Kandler and Ms. Wieber:

It has come to AT&T's attention that both Local Exchange Carriers of Michigan, Inc. ("LECMI") and Westphalia Telephone Company (OCN 0735) ("Westphalia") appear to be engaged in an unreasonable practice designed to inflate the originating and terminating access rates AT&T is assessed by Westphalia, both as an intermediate carrier for traffic transiting its network, and on behalf of LECMI. As a result of this practice, AT&T has determined that Westphalia's billing is inconsistent with both its own tariff and the Telecommunications Act, including rules issued by the Federal Communications Commission. Given these circumstances, AT&T has begun partially withholding payment on invoices (BAN ATX344FGD0735) issued by Westphalia, and further disputes past payments of inappropriate charges.

A review of Westphalia's invoices indicate that Westphalia is billing AT&T eighty-three (83) miles of transport for calls originating/terminating with end users of LECMI, in addition to local transport of varying amounts on behalf of LECMI. The LECMI end users are located in LATAs 340, 342, 344, 346 and 348, for which Westphalia provides intermediate switched access services, including Tandem switching performed at the Great Lakes Comnet tandem switch located in LATA 344 and Tandem transport in both LATA 340 and LATA 344, where the traffic is handed off to AT&T.

As an initial issue, Section 6.1 of the NECA tariff<sup>1</sup> sets forth the definition of Switched Access Service for which Westphalia can charge its IXC customers. Specifically, the tariff states:

Switched Access Service provides the ability to originate calls from an end user's premises to a customer designated premises, and to terminate calls from a customer designated premises to an end user's premises *in the LATA where it is provided*.

Under the terms of this tariff, Westphalia cannot charge AT&T for services provided outside of the LATA in which its end users are located. In this case, since Westphalia has provided service as an intermediate carrier between the local exchange carrier serving the end user in another LATA and AT&T's premise in a third LATA, it would be impermissible for Westphalia to charge AT&T for any mileage associated with the provision of the tandem switching function.<sup>2</sup>

Additionally, LECMI's network configuration and choice of tandem providers, in conjunction with Westphalia's services for transport to the Great Lakes Comnet tandem location, improperly impacts the billing to AT&T in at least two respects: (1) Westphalia's billing on behalf of LECMI for local transport as well as its own local transport is significantly higher than the local transport costs AT&T would incur if LECMI was homed to tandems within the LATAs in which it provides service to its end users rather than the Great Lakes Comnet tandem; and (2) the rate billed for interstate Tandem Switching on the Great Lakes Comnet tandem is higher than AT&T would likely pay alternative tandem providers within the LATAs in which LECMI's end users originate or receive long distance calls from AT&T's IXC customers.

AT&T believes that both these practices are inappropriate. Section 201(b) of the Telecommunications Act requires that "[a]ll charges, practices, classifications, and regulations for and in connection with [interstate] communication service, shall be just and reasonable."<sup>3</sup> In this case, there is simply no rational argument that charges based on the inefficient routing of traffic to the Great Lakes Comnet tandem instead of a tandem provider located within the individual LATAs in which LECMI operates and where the call originates or terminates, could be viewed as "just and reasonable." This is particularly true since this inefficient routing provides no additional benefit to AT&T or its customers, but instead merely provides an opportunity to increase revenues for LECMI, Great Lakes Comnet and Westphalia.

Finally, Westphalia appears to be billing the incorrect rate for the interstate tandem services provided by Great Lakes Comnet. It is AT&T's position that under the FCC's rules, Great Lake Comnet's provision of the alternative tandem services fits squarely into a rule's definition of "CLEC" as a local exchange carrier "that provides some or all of the interstate exchange access services used to send traffic to and from an end user and does not fall within the definition of

---

<sup>1</sup> Westphalia Telephone Company is listed as an Issuing Carrier in the National Exchange Carrier Association, Inc ("NECA") F.C.C. Tariff No. 5. Westphalia Telephone Company also concurs in the Michigan Exchange Carriers Association, Inc. Michigan Public Service Commission Tariff No 25, which adopts the language of Section 6.1 of the NECA tariff.

<sup>2</sup> AT&T is also puzzled by Westphalia's charges for tandem switching under its own OCN, since the tandem switch appears to be owned and operated by Great Lakes Comnet.

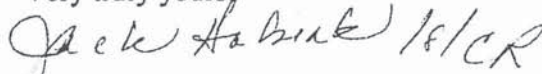

<sup>3</sup> 47 U.S.C. §201(b).

'incumbent local exchange carrier . . .'<sup>4</sup> Therefore, since Great Lakes Comnet is simply providing a comparable alternative to that provided by AT&T/Ameritech in LATA 344, it, and in turn Westphalia, is prohibited from charging in excess of the rate charged by AT&T/Ameritech for the same function.

If you have additional questions or would like to discuss this matter, please contact me.

Very truly yours,

A handwritten signature in cursive script, appearing to read "Jack Habiak /s/CR".

Re: **Informal Complaint of AT&T against Local Exchange Carriers of Michigan, Inc., Great Lakes Comnet, Inc., and Westphalia Telephone Co.**

Dear Ms. McEnery:

AT&T Services Inc., on behalf of itself and its operating affiliates ("AT&T"), pursuant to Section 1.716 to Section 1.718 of the Commission's rules, 47 C.F.R. §§ 1.716-1.718, is hereby filing an informal complaint against Local Exchange Carriers of Michigan, Inc. ("LEC-MI"), Great Lakes Comnet, Inc. ("GLC"), and Westphalia Telephone Co. ("Westphalia"), collectively referred to as the "Defendants."

## **I. INTRODUCTION AND REQUEST FOR RELIEF**

The three Defendants are operating an unlawful scheme to overcharge AT&T and other long distance carriers for switched access services. The traffic at issue is access stimulated traffic, which originates from one or more wireless carrier's national customers to toll-free, or "8YY," numbers. The Defendants aggregate the traffic in suburban Detroit and then haul it over 80 miles, to a location northwest of Lansing, Michigan, just so they can bill AT&T nearly 3.5 cents of tandem transport charges on each minute of use (along with other tandem-related charges). One of the Defendants (LEC-MI) also bills AT&T end office switching charges, even though the calls originate with a wireless carrier and not with the Defendant's own end users – and even though at least one other access customer receives a rebate of these (unlawful) charges.

All told, the three Defendants charge AT&T about 4.6 cents of switched access charges for each minute of every call originated to the toll-free numbers, plus a database dip charge of 0.55 cents on each call. By contrast, if this access stimulated traffic were aggregated in suburban Detroit, handed off to the nearest tandem switch, and then properly billed according to the Commission's rules, the lawful charges would be about 0.1293 cents per minute, plus a

Ms. Rosemary McEnery  
April 4, 2014  
Page 2

reasonable database dip charge. In other words, the Defendants' per minute charges are inflated by more than 35 times the lawful rate.

This scheme as carried out by the Defendants is patently unreasonable, and it violates the Commission's access charge rules in numerous respects, as set forth in more detail below. Among other violations, the two Defendants operating as competitive local exchange carriers ("CLECs") have filed a tariff pursuant to the Commission's "rural" exemption. But under the Commission's narrow definition of a "rural" CLEC, the Defendant CLECs are not "rural" and are not entitled to tariff or bill pursuant to the rural exemption. In fact, one Defendant CLEC (LEC-MI) has facilities in suburban Detroit and the other (GLC) operates (among other urban areas) across the street from Chicago's McCormick Place, the nation's largest convention center. The Defendants have also failed to file revised tariffs on a timely basis, as required by the Commission's access stimulation rules – even though, based on AT&T's analysis, the amount of traffic that they have billed AT&T surpassed the 100% growth trigger that creates a presumption of revenue sharing and thus access stimulation. In addition, the end office charges that AT&T is billed by one of the Defendants (LEC-MI) are plainly unlawful, because it has been established since 2004 that LECs cannot bill such charges for traffic that does not originate or terminate with their own end users. Those charges also plainly violate LEC-MI's tariff.

Further, and even if the Defendants billed only the appropriate rate elements at the prices required by the Commission's rules, their circuitous routing (and resulting inflated billing) of the traffic would be an unreasonable practice under Section 201(b) of the Act. There is simply no reason why long distance carriers and their customers should pay the extra cost for the unnecessary step of hauling this traffic over 80 miles across Michigan. The Commission has recently prohibited a similar "mileage-pumping" scheme, and, as in that case, the additional transport charges billed by GLC/Westphalia provide no benefits to customers but only result in an increase in their costs.<sup>1</sup>

Indeed, the Defendants' entire arrangement is nothing more than an unlawful "sham" that is designed to evade Commission regulations and to collect inflated access revenues that no Defendant could lawfully assess individually. Two of the three Defendants – the affiliated companies Westphalia and its parent, GLC – play an entirely superfluous role in the call routing, because LEC-MI could hand the traffic off to a nearby tandem provider rather than have GLC-Westphalia haul it over 80 miles.

In short, the Defendants' routing and billing practices plainly violate the Commission's rules and the Communications Act. The Defendants should therefore (i) refund amounts they

Page 3

improperly billed and that AT&T paid, (ii) revise their routing practices to end unnecessary “mileage-pumping” and (iii) reduce their rates to comply with the Commission’s rules.

## II. FACTUAL BACKGROUND

### A. The Defendants

**LEC-MI.** LEC-MI is a competitive LEC that operates a switch in Southfield, Michigan, a suburb of Detroit. As explained in more detail below, on the calls at issue LEC-MI’s bills to AT&T include end office switching charges, even though the calls at issue are not originated by (or terminated to) any LEC-MI end users, but rather are handed off by a wireless carrier or carriers.

**Westphalia.** Westphalia is an incumbent LEC that operates in and around Westphalia, Michigan. As described in more detail below, on the calls at issue Westphalia initially billed AT&T for over 80 miles of transport, across LATA boundaries, plus tandem switching. Since May, 2013, Westphalia has billed AT&T about a half-mile of transport, although it is not clear whether any Westphalia facilities ever were or are actually used in the routing of the calls at issue. Westphalia also acts as a billing agent on behalf of the other two Defendants. Westphalia is owned by Clinton County Telephone Company (“CCTC”) and its CEO is Paul Bowman.

**GLC.** Great Lakes Comnet is nominally a competitive LEC. Its CEO is also Paul Bowman. In 2011, GLC purchased CCTC, and thus Westphalia is owned by GLC. GLC operates a tandem switch in Westphalia, MI, and in this respect it purports to “compete” in the territory of its subsidiary, Westphalia. However, to AT&T’s knowledge, GLC has no end user customers in Westphalia, MI. Since May 2013, GLC’s function with regard to the scheme appears to be to bill (via Westphalia, its billing agent) over 80 miles of transport charges, at \$0.0004180 per mile per minute, which amounts to approximately 3.5 cents per minute.

GLC has filed an interstate access tariff with the Commission, and LEC-MI is an issuing carrier for the tariff. Thus, the terms of their services are governed by that tariff.<sup>2</sup> Westphalia is a member of NECA and concurs in the NECA tariff.

---

<sup>2</sup> The issuing carriers of this tariff have violated Section 61.16 of the Commission’s rules, because they last filed the complete base tariff on January 12, 2012, but since that time they have filed several transmittals revising the tariff without thereafter filing a revised base tariff. *See* 47 C.F.R. § 61.16(b) (“If there have been revisions that became effective up to and including the last day of the preceding month, a new Base Document must be submitted within the first five business days of the current month that will incorporate those revisions.”).

Ms. Rosemary McEnery  
April 4, 2014  
Page 4

## **B. The Calls At Issue And Defendants' Improper Charges**

Beginning in or around 2010, the volume of traffic billed by the Defendants to AT&T began to increase significantly. For example, according to AT&T's records, the volume of traffic to and from AT&T through LEC-MI's switch in Southfield in November, 2009 was about 999,000 minutes of use. By May, 2010, it increased to 1.98 million minutes; in May, 2011, it increased to 7.46 million minutes, in May, 2012, it increased to 20.13 million minutes, and in May, 2013, to 24.91 million minutes.

AT&T has since learned that the increase in traffic is related to aggregated 8YY traffic originating from customers of one or more wireless carriers.<sup>3</sup> When customers of some wireless carriers place an 8YY call, the wireless carrier, or a provider with which the wireless carrier contracts, arranges for the calls to be handed off to LEC-MI's switch in Southfield, Michigan, near Detroit. Although there are multiple tandem switches within a relatively short distance from Southfield, Michigan, pursuant to the scheme the calls are instead transported over 80 miles to GLC's tandem switch in Westphalia, Michigan. The calls are then handed off to AT&T, which is billed an array of originating access charges by Westphalia on behalf of all three Defendants. Appendix A has maps of the relevant portions of Michigan, showing how the Defendants route the traffic more than 80 miles, across LATA boundaries, when they could use a tandem switch that is within 7 miles of the LEC-MI switch in Southfield.

On these calls, the charges to AT&T include (1) LEC-MI's charges of 0.3594 cents per minute, which include charges for end office switching (0.3116 cents per minute), shared port, and transport termination; (2) GLC's charges of 4.1994 cents per minute, which include 82.17 miles of transport charges, allegedly provided by GLC since May 2013, and billed at \$0.000418 per mile per minute (3.4347 cents per minute), along with a transport termination charge of 0.2171 cents per minute, and a tandem switching charge of 0.5476 cents per minute; and (3) Westphalia's charges of 0.03469 cents per minute, which consist of 0.83 miles of transport charges at \$0.000418 per minute. AT&T is also billed a database dip charge of 0.55 cents per call. In total, for the 8YY calls at issue, the Defendants bill AT&T more than 4.5935 cents per minute for origination, plus the database dip charge.

---

<sup>3</sup> As the Commission is aware, AT&T completed its acquisition of Leap Wireless (operating under the Cricket brand) on March 13, 2014. AT&T confirmed after the completion of the acquisition that a significant amount of the traffic at issue here originated from Cricket. Cricket does not directly terminate traffic to any of the Defendants. Rather, Cricket has arrangements with certain third-party providers to route Cricket's originating 8YY traffic, and it appears that one of these providers has an arrangement with LEC-MI under which it hands off that traffic to that Defendant. Cricket intends to exercise rights it has under the contract with this provider to transition its traffic away from the third-party provider and onto AT&T's network.

Ms. Rosemary McEnery  
April 4, 2014  
Page 5

Initially, the bills AT&T received showed that Westphalia, not GLC, was providing tandem switching and 83 miles of tandem transport charges. On March 20, 2013, AT&T wrote to Westphalia and LEC-MI and disputed the charges on several grounds. Among other things, AT&T pointed out that the 83 miles of transport billed by Westphalia crossed LATA boundaries, even though Westphalia's tariff provided that its access services would be provided only in or within a LATA.<sup>4</sup> AT&T also pointed out that Westphalia was billing AT&T tandem switching charges for a tandem that appeared to be owned and operated by GLC.

Within just a few weeks, AT&T began receiving revised bills for the calls at issue. Beginning with invoices dated May, 2013, GLC began billing both the tandem switching charges and 82.17 miles of tandem transport charges. Westphalia's bills for tandem transport decreased to just 0.83 of a mile. AT&T continued to dispute the charges on multiple grounds, and it withheld payment of certain of the access charges billed by the Defendants.

Initially, AT&T presumed that the end office charges billed by LEC-MI were associated with traffic to and from LEC-MI's own end user customers, *i.e.*, homes and businesses in or near Southfield, Michigan. However, AT&T has since learned that most or all of the end office charges are being billed on calls originated by customers of a wireless carrier or carriers. Because the calls are merely transiting LEC-MI's facilities, and because LEC-MI is not using its switch to place calls onto loops to its end user customers, the end office switching charges are unlawful. Nevertheless, LEC-MI continues to bill AT&T end office switching charges. It does so even though, as AT&T understands it, LEC-MI offers rebates or credits to at least one other access customer for these charges.

### III. ARGUMENT

The Defendants' charges for switched access services to AT&T are unlawful in at least five independent respects. *First*, the tandem transport, tandem termination and tandem switching charges now being billed by GLC plainly violate the Commission's CLEC access charge rules because GLC is billing at rates that exceed those of the competing ILEC.<sup>5</sup>

*Second*, the tandem transport and tandem switching charges billed by Westphalia are improper because Westphalia did not operate the facilities used to provide the services and, in

---

<sup>4</sup> See *Alpine*, ¶¶ 31-34 (interpreting same tariff language to bar provision of interLATA transport charges).

<sup>5</sup> See 47 C.F.R. § 61.26; see also *CLEC Access Charge Reform Order*, 16 FCC Rcd. 9923 (2001), *recon.*, Eighth Report and Order, 19 FCC Rcd. 9108 (2004).

Ms. Rosemary McEnery  
April 4, 2014  
Page 6

any event, the 83 miles of tandem transport charges billed prior to May, 2013 improperly crossed LATA boundaries, in violation of Westphalia's tariff.<sup>6</sup>

*Third*, the Defendants have violated the Commission's access stimulation rules.<sup>7</sup> According to AT&T's analysis of the minutes billed to AT&T through the LEC-MI switch, the volume of traffic billed to AT&T has increased by more than 100 percent from May, 2011 to May, 2012 (and again from June, 2011 to June, 2012), creating a presumption of a revenue sharing agreement.<sup>8</sup> Yet, the Defendants did not file revised tariffs on a timely basis to lower their rates to those charged by the lowest-priced price cap LEC in Michigan, as is required by the Commission's rules,.

*Fourth*, the end office switching charges billed by LEC-MI are improper because LEC-MI does not originate those calls from its own end user customers, but instead (at most) merely transits the traffic from a wireless carrier. Further, LEC-MI's end office charges to AT&T are discriminatory, in violation of Section 202, because it has provided rebates of those charges to at least one other customer, but not to AT&T.

*Fifth*, although Defendants have clearly violated the Commission's rules, even if they had not, their convoluted routing practices and inflated access charges to AT&T would be unlawful under Section 201(b), which outlaws unjust and unreasonable practices.

**A. GLC's Rates Violate The Commission's CLEC Benchmarking Rules Because They Substantially Exceed The Rates Of The Competing ILEC.**

Since 2001, in recognition of CLECs' monopoly power over switched access services, the Commission's rules have limited the rates that CLECs can impose on access customers through switched access tariffs. Specifically, the Commission's rules provide that a CLEC "shall not file a tariff for its interstate switched access services" that is above the "rate charged for such services by the competing ILEC." 47 C.F.R. § 61.26(b). A "competing ILEC" is the "incumbent local exchange carrier, as defined in 47 U.S.C. 251(h), that would provide interstate exchange access services, in whole or in part, to the extent those services were not provided by the CLEC." *Id.* § 61.26(a)(2). A CLEC tariff containing rates above those charged by the competing ILEC is void *ab initio*. Because the CLEC was never supposed to file such a tariff in the first instance (or

---

<sup>6</sup> NECA Tariff, 4<sup>th</sup> Revised Title Page 1, § 6.1, 10<sup>th</sup> Rev. Page 6-1; *Alpine*, ¶¶ 31-34.

<sup>7</sup> *Connect America Fund Order*, 26 FCC Rcd. 17663 (2011); 47 C.F.R. §§ 61.26(g); 61.3(bbb).

<sup>8</sup> *Connect America Fund Order*, ¶¶ 675, 699.

Ms. Rosemary McEnery  
April 4, 2014  
Page 7

should re-file its tariff once its tariffed rates come out of compliance), the tariff is not lawful when filed and cannot become “deemed lawful” pursuant to 47 U.S.C. § 204(a)(3).<sup>9</sup>

On the calls at issue, GLC, which is a CLEC subject to Rule 61.26, accepts the traffic at LEC-MI’s switch in Southfield, Michigan, transports the traffic 83 miles to its switch in Westphalia, Michigan, and then hands off the calls to IXC’s. If these tandem “services were not provided by [GLC],” 47 C.F.R. § 61.26(a)(2), then the incumbent LEC that would provide these services is AT&T Michigan, which operates a tandem switch that is located about seven miles away from LEC-MI’s Southfield switch. Thus, for the calls at issue, AT&T Michigan is the “competing LEC” under the Commission’s CLEC access charge rules.

AT&T Michigan’s tariffed rate for tandem transport is only \$0.000013 per minute per mile.<sup>10</sup> With seven miles of transport between AT&T Michigan’s tandem switch and LEC-MI’s Southfield switch, the competing ILEC rate for tandem transport on the calls at issue is only \$0.000091 per minute. Indeed, even if it were proper to bill for 83 miles of transport – which it is not – then the lawful charge would be just over one-tenth of a penny (\$0.001079).

GLC’s rates, however, are much higher than AT&T Michigan’s rates. GLC’s tariff provides that its rate for “Tandem Switched Transport” is “the applicable current rate at NECA Tariff F.C.C. No. 5, Section 17.2.2., Premium Access – Tandem Switched Transport.”<sup>11</sup> This section of the NECA tariff, in turn, contains two “Rate Bands” for premium tandem switched transport: Rate Band 1, which is \$0.000195 per minute per mile, and Rate Band 2, which is \$0.00418 per minute per mile.<sup>12</sup>

GLC’s tariff does not specify which NECA rate band applies, and thus is vague and ambiguous, in violation of Rules 61.2(a) and 61.25.<sup>13</sup> However, GLC has billed AT&T using

---

<sup>9</sup> See Brief For Amicus Curaie Federal Communications Commission, at 25-28, filed in *PaeTec Commc’ns v. MCI Commc’ns Servs.*, No. 11-2268, et al. (3d Cir., filed March 14, 2012) (“*PaeTec Amicus Brief*”). In that brief, the Commission explained that a “CLEC tariff for interstate switched access services that includes rates in excess of the benchmark in Rule 61.26 is subject to mandatory detariffing. Under that regime, a carrier is *prohibited* from filing a tariff; any attempt to do so would violate the FCC’s rules and render the prohibited tariff *void ab initio*.” *Id.* at 25.

<sup>10</sup> AT&T Tariff F.C.C. No. 2, § 6.9.1(A), 25<sup>th</sup> Rev. Page 207.1.

<sup>11</sup> GLC Tariff F.C.C. No. 20, § 17GLC.2.2, Original Page 17GLC-10.3.

<sup>12</sup> NECA Tariff F.C.C. No. 5, § 17.2.2., 7<sup>th</sup> Revised Page 17-10.2.1.2 (eff. Jan. 1, 2013).

<sup>13</sup> 47 C.F.R. § 61.2(a) (“In order to remove all doubt as to their proper application, all tariff publications must contain clear and explicit explanatory statements regarding the rates and regulations”); *id.* § 61.25(c) (when a non-dominant carrier cross-references another carrier’s tariff, the “issuing carrier must specifically identify in its tariff the rates being cross-referenced so as to leave no doubt as to the exact rates that will apply”); see *All American Tel. Co., Tariff F.C.C. No. 3*, 25 FCC Rcd. 5661, ¶ 3 (2010).

Ms. Rosemary McEnery  
April 4, 2014  
Page 8

Rate Band 2, at a rate of \$0.00418 per minute per mile. As such, GLC's rates starkly and unambiguously violate the Commission's CLEC access charge rules. GLC's rate of \$0.000418 per minute per mile is more than 30 times higher than the rate of AT&T Michigan, the competing ILEC on the calls at issue. What is more, GLC bills AT&T for 83 miles of transport, and thus the overall GLC tandem transport rate on the calls at issue is \$0.0347 per minute. In short, for the calls at issue, GLC's billed rate for tandem transport is more than 380 times that of the competing ILEC.

A similar conclusion applies to GLC's tandem switching charges. GLC's tariff provides that its rate for "Tandem Switching" is "the applicable current rate at NECA Tariff F.C.C. No. 5, Section 17.2.2., Premium Access – Tandem Switched Transport, Tandem Switching."<sup>14</sup> This section of the NECA tariff, in turn, contains two "Rate Bands" for premium tandem switching: Rate Band 1, which is \$0.002564 per minute, and Rate Band 2, which is \$0.005476 per minute.<sup>15</sup>

Again, GLC's tariff does not specify which NECA rate band applies, and thus is vague and ambiguous, in violation of Rules 61.2(a) and 61.25. However, GLC has billed AT&T using Rate Band 2, at a rate of \$0.005476 per minute. As such, GLC's tandem switching rate violates the Commission's CLEC access charge rules. AT&T Michigan's tandem switching rate is \$0.001084.<sup>16</sup> Because GLC's tandem switching rate is more than five times higher than that of the competing ILEC, its tariff is unlawful and void *ab initio*.<sup>17</sup>

Ostensibly in an effort to avoid the requirements of the Commission's CLEC access charge rule, GLC's tariff contains a provision stating that all issuing carriers, including GLC, are "rural CLEC[s] under Section 61.26(a)(6)" of the Commission's rules.<sup>18</sup> However, there is no merit whatsoever to this claim, and GLC is not entitled to bill AT&T pursuant to the Commission's "rural exemption" in Rule 61.26(e).

As the Commission has explained, its rural exemption is a "narrow" and "administratively simpl[e]" exception to the general "market-based" rule that a CLEC's tariffed rates may not exceed those of the competing ILEC. *Eighth Report and Order*, 19 FCC Rcd. 9108, ¶ 37. The exemption is available only to a CLEC "competing with a non-rural incumbent LEC" and does not apply "if any portion of the competitive LEC's service area falls within a

Page 9

non-rural area.” *Id.* ¶ 33 (emphasis added). Indeed, providing service to even “a single end user in a non-rural area” is enough to “entirely disqualify” a CLEC from using the rural exemption. *Id.* ¶ 36.

GLC plainly does not qualify for the rural exemption. On its website, GLC trumpets its extensive fiber network that shows facilities in or near Chicago, Detroit, Lansing, Grand Rapids, and Ann Arbor.<sup>19</sup> Indeed, GLC claims to offer service in a building in Chicago that is across the street from McCormick Place, the largest convention center in North America.<sup>20</sup> It is thus clear that substantial portions of GLC’s service territories fall within urban, not rural, areas and that the rural exemption is entirely inapplicable to GLC.<sup>21</sup>

As a consequence, GLC may only file a tariff for switched access services if it complies with the general market-based benchmarking rule in Rule 61.26(b), which limits GLC to the rates of the “competing ILEC,” in this case AT&T Michigan. As explained above, however, GLC’s tariff fails this requirement because its rates substantially exceed AT&T Michigan’s rates. Accordingly, its tariff is unlawful and void *ab initio*.

**B. Westphalia’s Transport Charges Are Also Unlawful, Because It May Not Bill For InterLATA Services or For Services That It Does Not Provide.**

Prior to May, 2013, Defendant Westphalia was billing AT&T charges for tandem switching, transport termination, and for 83 miles of tandem transport, apparently on the grounds that Westphalia was itself providing those services to AT&T. After May 2013, Westphalia halted its tandem switching charges and all but 0.83 of a mile of the tandem transport, with Westphalia’s parent, GLC, billing those amounts going forward. Westphalia’s charges, however, are unlawful and any amounts paid by AT&T to Westphalia on the traffic at issue should be refunded.

The plain terms of Westphalia’s tariff – the NECA access tariff – bar it from providing and billing AT&T for tandem transport between Southfield and Westphalia. Southfield is in

---

<sup>19</sup> [http://www.glcom.net/network/glc\\_network\\_map.pdf](http://www.glcom.net/network/glc_network_map.pdf).

<sup>20</sup> [http://www.glcom.net/network/glc\\_optical\\_sites.pdf](http://www.glcom.net/network/glc_optical_sites.pdf) (showing, for example, “service availability” at “350 E. Cermak, 5<sup>th</sup> Flr, Chicago, IL, 60616”).

<sup>21</sup> Further, on the calls at issue, the end users originating the calls are located nationwide, undoubtedly including urban areas. Accordingly, for these calls, GLC is plainly not a “rural CLEC,” which is defined as a CLEC that does not “originate traffic from any end users located within either (i) Any incorporated place of 50,000 inhabitants or more . . . or (ii) an urbanized area.” 47 C.F.R. § 61.26(a)(6).

Ms. Rosemary McEnery  
April 4, 2014  
Page 10

LATA 340, whereas Westphalia is in LATA 344.<sup>22</sup> Transport between these two points is therefore an interLATA service.

The title page of the NECA tariff expressly circumscribes the area in which the access service (including transport) may be provided, stating that the tariff governs “the provision of Access Services *within a Local Access and Transport Area (LATA) or equivalent Market Area.*”<sup>23</sup> Further, Section 6.1 of the tariff states that “Switched Access Service provides for the ability to originate calls from an end user’s premises to a customer designated premises, and to terminate calls from a customer designated premises to an end user’s premises *in the LATA where it is provided.*”<sup>24</sup> In *Alpine*, the Commission construed these same tariff provisions, and held that the provisions made it unlawful for LECs to bill for transport services between Des Moines, Iowa, which was in LATA 632, and other points in different Iowa LATAs. *Alpine*, ¶ 34.

For the same reasons, Westphalia’s provision of interLATA service between LATA 340 (Southfield) and LATA 344 (Westphalia) is barred by the plain terms of Westphalia’s tariff. Indeed, Westphalia itself seems to have recognized this violation, because soon after AT&T pointed it out, the interLATA transport was suddenly being billed by its parent, GLC.

Westphalia’s charges are also improper for another, independent reason – it does not provide the services for which it billed. The Commission’s “long-standing policy” is that LEC “should charge only for those services that they provide.” *Eighth Report and Order*, ¶ 21. Prior to May 2013, Westphalia was billing AT&T tandem switching charges, not on behalf of GLC, but as though Westphalia was itself providing the tandem switching service. However, the tandem switch for which it was billing was owned and operated by GLC. Westphalia’s tandem switching charges thus are unlawful. *See also PaeTec Amicus Brief* at 12 (“If a CLEC does not provide tandem switching, it may not charge for tandem switching”).

### **C. The Defendants Have Violated The Commission’s Access Stimulation Rules.**

Most of the Defendants’ charges to AT&T are unlawful on an entirely independent ground: according to AT&T’s analysis of the relevant bills, the Defendants are engaged in “access stimulation” under the Commission’s rules, and thus they were required to filed revised tariffs that reduced their rates to no higher than the rates charged by the lowest-priced price cap carrier in Michigan. However, the Defendants failed make these required filings on a timely basis, resulting in rates that have exceeded the Commission’s rules.

<sup>22</sup> See [http://www.latamaps.com/Telecom\\_Maps/Regional\\_LATA\\_maps/North\\_Central\\_LATA\\_Map\\_-\\_Maponics.pdf](http://www.latamaps.com/Telecom_Maps/Regional_LATA_maps/North_Central_LATA_Map_-_Maponics.pdf). See also Appendix A.

<sup>23</sup> NECA Tariff, FCC No. 5, Original Title Page 1, Access Service (emphasis added).

<sup>24</sup> *Id.* NECA Tariff No. 5, § 6.1, Original Page 6-1 (emphasis added).

Ms. Rosemary McEnery  
April 4, 2014  
Page 11

In 2011, the Commission issued rules to curtail “access stimulation,” finding that when LECs enter into arrangements that result in “significant increases in access traffic with unchanged access rates,” the result is “inflated profits” and rates that “almost uniformly” are “unjust and unreasonable under Section 201(b) of the Act.” *Connect America Fund Order* ¶ 657. To curtail the numerous “adverse effects of access stimulation,” the Commission required LECs that engage in access stimulation to file revised tariffs with lower rates. *Id.* ¶¶ 667, 679.

The Commission’s definition of “access stimulation” entails two conditions. The first is that a LEC has “either an interstate terminating-to-originating traffic ratio of at least 3:1 in a calendar month, or has had more than a 100 percent growth in interstate originating and/or terminating switched access minutes of use in a month compared to the same month in the preceding year.” 47 C.F.R. § 61.3(bbb)(1)(ii).

The Defendants satisfy that first condition. As explained above, AT&T’s records show that the volumes of traffic coming through the LEC-MI switch in Southfield, Michigan increased dramatically over time. Virtually all of these increases are likely associated with the 8YY aggregated traffic handled by each Defendant. In particular, and as shown in Appendix B, since the end of 2011, when the Commission’s access stimulation rules became effective, the volume of interstate access minutes of use between AT&T and this switch increased by 170 percent between May, 2012 (20.13 million MOUs) and May, 2011 (7.46 million MOUs); it increased by 123 percent between June, 2012 (19.20 million MOUs) and June, 2011 (8.63 million MOUs).

The second condition of “access stimulation” is the existence of an “access revenue sharing agreement,” which is an agreement “whether express, implied, written or oral, that, over the course of the agreement, would directly or indirectly result in a net payment to the other party (including affiliates) to the agreement, in which payment by the rate-of-return local exchange carrier or Competitive Local Exchange Carrier is based on the billing or collection of access charges from interexchange carriers or wireless carriers. When determining whether there is a net payment under this rule, all payments, discounts, credits, services, features, functions, and other items of value, regardless of form, provided by the rate-of-return local exchange carrier or Competitive Local Exchange Carrier to the other party to the agreement shall be taken into account.” 47 C.F.R. § 61.3(bbb)(1)(i).

As the Commission has explained, its rule “focuses on revenue sharing that would result in a net payment” from the LECs to the other entity. *Connect America Fund Order* ¶ 670. Because the precise nature of any revenue sharing arrangements is generally not known by the long distance carriers, the Commission held that a “complaining carrier may rely on the 3:1 terminating-to-originating traffic ratio and/or the traffic growth factor for the traffic it exchanges with the LEC as the basis for filing a complaint. This creates a rebuttable presumption that revenue sharing is occurring and that the LEC has violated the Commission’s rules. The LEC

Ms. Rosemary McEnery  
April 4, 2014  
Page 12

then has the burden of showing that it does not meet both conditions of the definition.” *Id.* ¶ 699.

Because AT&T’s records show that the Defendants meet the traffic growth factor, there is a rebuttable presumption that there is a revenue sharing agreement for the calls at issue, thus satisfying the second condition of the Commission’s definition of access stimulation. There is also good reason to believe that, in fact, Defendants have a revenue sharing agreement. Notably, in other cases involving 8YY aggregation arrangements with wireless carriers, LECs have admitted that they made payments to the wireless carriers.<sup>25</sup> Further, as a practical matter, there seems to be little incentive for a wireless carrier, or another provider acting on behalf of a wireless carrier, to undertake the burden of carrying its nationwide 8YY traffic to Southfield, Michigan, unless it receives a financial benefit in return.

Unless Defendants successfully rebut the presumption under the Commission’s rules (either by rebutting the traffic growth data or by demonstrating that they have no revenue sharing agreement under the Commission’s broad definition), then they have engaged in access stimulation within the meaning of the Commission’s rules. As such, they were required to file new tariffs after they began engaging in access stimulation.<sup>26</sup> Those revised tariffs must reduce the Defendants’ rates so that they do not exceed the rates of the lowest priced price cap LEC in Michigan.

However, the Defendants have failed to file revised tariffs on a timely basis with reduced rates that do not exceed the rates tariffed by the lowest-priced price cap LEC in the state.<sup>27</sup> Because they did not file revised tariffs when they were obligated to do so, Defendants cannot collect access charges under those unlawful tariffs.

---

<sup>25</sup> See, e.g., *Hypercube Telecom v. Level 3 Commc’ns*, 2011 WL 2907304 (Cal. PUC, July 14, 2011) (Hypercube, the aggregating CLEC, “admitted that it has contracts with certain CMRS providers pursuant to which it makes payments to the CMRS providers”); *Hypercube v. Comtel Telecom Assets*, 2009 WL 3075208 (N.D. Tex. Sept. 25, 2009) (“Hypercube shares its fees from [the long distance provider] with the wireless company to induce the wireless company to continue sending Hypercube calls”).

<sup>26</sup> Further, the Commission’s rules prohibit a carrier engaging in access stimulation from participating in NECA tariffs. See *Connect America Fund Order* ¶¶ 681-82. Thus, Defendant Westphalia should have withdrawn from NECA and filed its own tariff.

<sup>27</sup> On March 18, 2013, LEC-MI filed tariff revisions that reduced its tariffed rates, but, given the traffic growth, it should have filed those tariffs months earlier. In fact, prior to April, 2013, LEC-MI’s tariffed charges violated Section 61.26 of the Commission’s rules, because LEC-MI’s rates exceeded those of the competing ILEC. See 47 C.F.R. § 61.26; see *supra* Part III.A.

Ms. Rosemary McEnery  
April 4, 2014  
Page 13

**D. LEC-MI Is Unlawfully Billing AT&T End Office Switching Charges For Transiting Traffic That Does Not Originate With Any LEC-MI End Users.**

On the calls at issue, LEC-MI has billed AT&T end office switching charges (and related shared port and transport termination charges), but all of these charges are unlawful on at least three grounds. *First*, it has been settled since 2004 that a CLEC may not assess originating end office switching charges when it does not originate calls from its own end users. *Eighth Report and Order*, 19 FCC Rcd. 9108, ¶¶ 15-17 (“the benchmark rate established in the *CLEC Access Reform Order* is available only when a competitive LEC provides an IXC with access to the competitive LEC’s own end users”). Where, as here, a CLEC merely transits traffic from a wireless carrier, it may not assess end office switching. *Id.* ¶ 21 (the “competing incumbent LEC switching rate is the end office switching rate when a competitive LEC originates or terminates calls to end-users and the tandem switching rate when a competitive LEC passes calls between two other carriers”).<sup>28</sup>

*Second*, LEC-MI’s charges violate the terms of its tariff, for the reasons the Commission explained in *Qwest Commc’ns. Corp. v. Farmers & Merchs. Mut. Tel. Co.*<sup>29</sup> As in that case, LEC-MI’s tariff provides that “Switched Access Service provides for the ability to originate calls from an *end user’s* premises. . . .”<sup>30</sup> Under LEC-MI’s tariff, an “End User” is a “customer” of telecommunications service “that is not a carrier,” and a customer, in turn, is defined as an entity that “subscribes to the services offered under this tariff.”<sup>31</sup>

On the calls at issue, however, LEC-MI is not “originat[ing] calls from an end user’s premises” and thus not providing switched access service at all within the meaning of its tariff. The wireless carrier’s customers – namely, the persons dialing the 8YY calls – are not end users or customers under LEC-MI’s tariff. They do not “subscribe” to any tariffed services provided by LEC-MI; indeed, they are surely not even aware that LEC-MI plays any role in routing their call. Nor is the wireless carrier an “end user” because the tariff provides that, except in circumstances not present here, an end user is a customer “that is *not* a carrier.” Accordingly, as in *Farmers*, LEC-MI’s tariff bars it from billing AT&T for switched access services on the calls at issue.

---

<sup>28</sup> Under the Commission’s rules, LEC-MI may not bill *any* end office charges (or associated port or termination charges) on the traffic at issue. But even if such charges were appropriate (and they are not), LEC-MI’s end office charges prior to April, 2013 are also unlawful because, for the reasons just explained above, its rates exceeded those of the competing ILEC. 47 C.F.R. § 61.26.

<sup>29</sup> *Qwest Commc’ns. Corp. v. Farmers & Merchs. Mut. Tel. Co.*, 24 FCC Rcd. 14801 (2009) (“*Farmers*”), *recon. denied*, 25 FCC Rcd. 3422 (2010), *aff’d*, 668 F.3d 714 (D.C. Cir. 2011).

<sup>30</sup> GLC Tariff F.C.C. No. 20, § 6.1, 1<sup>st</sup> Rev. Page 6-1 (emphasis added).

<sup>31</sup> *Id.* § 2.6, 1<sup>st</sup> Rev. Page 2-65.1 and Original Page 2-68.

Ms. Rosemary McEnery  
April 4, 2014  
Page 14

*Third*, AT&T has learned that LEC-MI has provided at least one other access customer a refund or credit of end office switching charges. LEC-MI has not provided any such rebate or credit to AT&T, however, and its failure to do so constitutes unlawful discrimination in violation of Section 202 of the Communications Act. Upon information and belief, the services that LEC-MI allegedly is providing to AT&T are the same as those provided to other putative access customers, and AT&T believes that it is similarly situated to the other access customer (or customers) to which LEC-MI provides rebates or credits. And there is no reasonable basis to provide rebates and/or credits to some long distance customers, but not to AT&T. LEC-MI's end office charges to AT&T thus violate Section 202.<sup>32</sup>

**E. Defendants' Charges Are Part Of An Unlawful, Sham Arrangement, In Violation Of Section 201(b), That Raises Customers' Costs Without Providing Any Offsetting Benefits.**

For the reasons set forth above, the Defendants' charges on the 8YY aggregated traffic at issue violate their own tariffs and/or the Commission's access charge rules. However, even if that were not true (or even if the Defendants revised their rates to comply with the rules), the Defendants' billing and routing practices are unlawful and unreasonable pursuant to Section 201(b) of the Act.

The Defendants have engaged in sham arrangements that have no valid purpose, other than to inflate the switched access charges billed by AT&T. In several cases, the Commission has held that carriers cannot use "sham" entities or arrangements that have no valid purpose, but that merely allow the carriers to "circumvent regulation" and "capture access revenues that could not otherwise be obtained by lawful tariffs."<sup>33</sup> Likewise, the Commission has recognized that

---

<sup>32</sup> As set forth above, LEC-MI's end office charges are barred by the Commission's rules and its tariffs. However, to the extent such charges are permitted under the tariff, but LEC-MI nonetheless is crediting or rebating these charges to some customer or customers, LEC-MI's credit and/or rebate would also violate the plain terms of Section 203(c) of the Act, which provides that no carrier shall "refund or remit by any means or device any portion of the charges so specified." 47 U.S.C. § 203(c).

<sup>33</sup> *AT&T and Sprint Petitions for Declaratory Ruling on CLEC Access Charge Issues*, 16 FCC Rcd. 19158, ¶ 22 n.33 (2001) (it is unlawful under Section 201(b) to create "a company that purport[s] to be a *bona fide* carrier but which instead [is] simply a sham creation, designed to facilitate an arrangement among several entities to capture access revenues that could not otherwise be obtained by lawful tariffs"), *overruled on other grounds*, *AT&T Corp. v. FCC*, 292 F.3d 808 (D.C. Cir. 2002); *see Establishing Just and Reasonable Rates for Local Exchange Carriers*, 22 FCC Rcd. 11629, ¶ 6 n.20 (2007) (the Commission has "found that an arrangement between a chat line service provider and competitive access provider (formed by an ILEC for purposes of the arrangement) that did not provide local exchange service and had no customers other than the chat line was a sham"); *Total Telecomm. Servs. Inc. v. AT&T Corp.*, 16 FCC Rcd. 5726, ¶¶ 15-18 (2001), *aff'd in relevant part sub nom. AT&T Corp. v. FCC*, 317 F.3d 227, 233 (D.C. Cir. 2003) ("the entire arrangement was devised solely in order to circumvent regulation . . .

Ms. Rosemary McEnery  
April 4, 2014  
Page 15

LECs cannot “manipulat[e]” routing arrangements, with the intent and effect of ‘pumping’ mileage charges” without providing long distance carriers or their customers with benefits that offset the increased routing costs. *Alpine* ¶¶ 44-45.

This is precisely what is occurring here. To the extent it is appropriate for a wireless carrier’s 8YY traffic to be aggregated, that function can be accomplished much more simply, at much lower cost, ordinarily using a single LEC. Most notably, AT&T is aware of no valid reason why the calls, once aggregated at LEC-MI’s switch in Southfield, cannot be handed off at one of the numerous tandems in or around suburban Detroit. In addition to AT&T Michigan, other providers, including Frontier, operate switches in the area.<sup>34</sup> Use of one of these other tandem switches would reduce the tandem transport mileage charges from 83 miles to about 7 miles.

In that instance, the cost for originating these calls would be about \$0.001293 per minute, plus a reasonable database dip charge. The per minute charges would include a tandem switching charge, plus a tandem transport charge with about 7 miles of transport mileage. By contrast, the Defendants charge about 4.6 cents for each minute of originating traffic, plus a database dip charge.

The Defendants – by introducing two additional, affiliated LECs into the call routing, by hauling the traffic over 80 miles across Michigan, and by assessing high rates that do not reflect the efficiencies of carrying large volumes of traffic – have created a convoluted and costly sham routing arrangement that serves no valid purpose. In this regard, neither Westphalia nor its parent GLC appears to perform any valid or necessary function on these calls.<sup>35</sup> Rather, they

---

[and] deserves to be treated as a sham”); *AT&T Corp. v. All American Tel. Co.*, 28 FCC Rcd. 3477 (2013) (it was an unreasonable practice for a LEC and chat room provider to use a sham CLEC to act as a vehicle to bill access charges so that rates would increase and then avoid regulation that would reduce the rates).

<sup>34</sup> Although AT&T Michigan’s tandem is, as a factual matter, closest to LEC-MI’s switch, AT&T is not asserting that it is unlawful or unreasonable for the Defendants to use a competitive tandem provider. However, it is well-established that the use of competitive facilities cannot ordinarily result in customers paying *higher* prices than those charged by the incumbent. See *CLEC Access Reform Order* ¶ 37 (“it is highly unusual for a competitor to enter a market at a price dramatically above the price charged by the incumbent, absent a differentiated service offering”). Thus, if the Defendants want to use competitive tandem services, the resulting charges for the competitive services should not be priced above what the services would cost if the incumbents’ services were used.

<sup>35</sup> Indeed, LEC-MI’s switch was at one time connected to AT&T Michigan’s nearby tandem. See *Hypercube*, 2009 WL 3075208 (finding that, under the Commission’s CLEC access rules, the Commission did not intend to allow “unnecessary intermediate LECs demanding payment from IXC’s. The FCC surely did not intend to require IXCs to pay LEC who are merely profiting from the FCC’s rulings. . . . A company that provides no additional value to anyone may not unnecessarily insert itself into a chain of carriers”).

Ms. Rosemary McEnery  
April 4, 2014  
Page 16

appear to be inserted into the call routing path solely to justify billing of additional access charges. This is especially indefensible in light of the fact that GLC and Westphalia are commonly owned and operated, and that GLC was suddenly substituted as the service provider when AT&T pointed out that Westphalia could not lawfully bill for tandem switching or tandem transport.<sup>36</sup>

For these reasons, the Defendants' routing and billing arrangements would violate Section 201(b) even if their charges were consistent with the Commission's rules. In particular, even if the Defendants' rates were tariffed at the levels required by the Commission rules, they should not be permitted to bill over 80 miles of tandem transport charges that are unnecessary and simply raise the costs of their customers and long distance users.

Sincerely,

/s/ Michael J. Hunseder

**Re: Verizon, CenturyLink and Sprint's Informal Complaint Against Local Exchange Carriers of Michigan, Inc; Great Lakes Comnet, Inc; and Westphalia Telephone Company**

Pursuant to 47 C.F.R. § 1.716, the following interexchange carriers -- MCI Communications Services, Inc. d/b/a Verizon Business Services ("Verizon"); Qwest Communications Company, LLC d/b/a CenturyLink QCC ("CenturyLink"); and Sprint Communications Company L.P. ("Sprint") (collectively "Complainants") -- bring this informal complaint against Local Exchange Carriers of Michigan, Inc. ("LEC MI"), Great Lakes Comnet ("GLC"), and Westphalia Telephone Company ("WTC") (collectively "Defendants").

Defendants have established unlawful arrangements (1) to stimulate an enormous increase in interstate switched access traffic that exceeds the traffic pumping benchmark in Section 61.3(bbb)(1)(i) of the Commission's rules, and (2) to route all such access traffic to a tandem switch 83 miles away, instead of through a nearby AT&T Michigan tandem (7 miles away), in order to generate unreasonable and excessive interstate switched access charges. The Commission has found that such "mileage pumping" arrangements violate Section 201(b) of the Act. *AT&T v. Alpine*, 27 FCC Rcd 11511 (2012). Defendants' switched access rates should be no higher than those of the price cap LEC "with the lowest switched access rates in the state"<sup>1</sup> but, even if not, their rates cannot be higher than the general CLEC benchmark, i.e., the access rates of the competing ILEC.<sup>2</sup> Defendants' access rates greatly exceed both benchmarks and thus violate the Commission's rules. Defendants are billing Complainants a tandem switched transport rate that is **209 times higher** than that of the price cap LEC with the lowest rates in Michigan (Frontier) and more than **30 times higher** than the rate charged by the competing ILEC (AT&T Michigan).

WTC (which is the billing agent for the three Defendants) bills IXC's for 83 miles of transport to a distant tandem switch in a different LATA at a rate of \$0.0004180 per minute per mile, for a total per minute rate of \$0.035. In contrast, more efficient and reasonable tandem routing at the legally correct rates would result in drastically lower charges. Transporting the calls seven (7) miles to the nearest ILEC tandem switch and applying the competing ILEC's rate of \$0.000013 per minute

---

<sup>1</sup> 47 C.F.R. § 61.26(g)(1) (specifying maximum tariff rates for a CLEC engaging in access stimulation).

<sup>2</sup> 47 C.F.R. § 61.26(b)(1).

Ms. Rosemary McEnery  
February 26, 2014  
Page 2

per mile would result in a transport charge of less than one-hundredth of a cent. WTC charges 69 cents (\$0.69) for transport on a 20-minute call, whereas the lawful charge for such a call is far less than a penny (\$0.0018). In fact, WTC is billing the interexchange carriers (“IXCs”) **381 times** as much as the competing ILEC would bill for the same transport service. Defendants’ billing practices have resulted in tens of millions of dollars in excessive, unjustified charges billed to the Complainants.

Defendants have violated section 201 of the Communications Act, 47 U.S.C. § 201, by failing to route interexchange traffic in a reasonable, cost-effective manner and by refusing to establish alternative routing arrangements that would avoid excessive mileage charges. Because Defendants’ charges to Complainants are unlawful under sections 201 and 203 of the Act, Complainants respectfully request that the Commission order Defendants to revise their bills to each Complainant, issue credits to each of the Complainants equal to the amounts Defendants have unlawfully billed them, and refund to each of the Complainants all unlawful charges that the Complainants have paid to Defendants.

### **FACTUAL BACKGROUND**

#### **A. The Parties**

Local Exchange Carriers of Michigan, Inc. (“LEC MI”) is a competitive local exchange carrier in Southfield, Michigan, which is a suburb of Detroit. Great Lakes Comnet (“GLC”) is a competitive local exchange carrier that provides tandem switching services in Michigan. Its tandem switch is in Westphalia, MI, east of Lansing. The distance between LEC MI’s end office switch in Southfield and GLC’s tandem switch is 83 miles. Westphalia Telephone Company (“WTC”) is a local exchange carrier in Michigan that also provides billing services for other carriers, including LEC MI and GLC.

The three Defendants have several interlocking relationships and, indeed, two of the companies – GLC and WTC -- are commonly-owned and operated.<sup>3</sup> GLC has filed interstate and intrastate switched access tariffs.<sup>4</sup> Those tariffs also include the rates, terms and conditions for access services provided by LEC MI and several other local exchange carriers.<sup>5</sup> As a result, LEC MI does not maintain its own access tariffs; rather, GLC files any tariff revisions on behalf of LEC MI (and other local exchange carriers) within GLC’s own tariffs. WTC also operates as a billing

---

<sup>3</sup> WTC is a wholly-owned subsidiary of Clinton County Telephone Company (“CCTC”), which also invested in GLC. On September 30, 2011, GLC purchased all of the issued and outstanding stock in CCTC. CCTC and its subsidiaries, including WTC, are now wholly-owned by GLC. WTC and GLC share the same Chief Executive Officer, Mr. Paul Bowman.

<sup>4</sup> Great Lakes Comnet, Inc. Tariff F.C.C. No. 20 and Great Lakes Comnet, Inc. Tariff M.P.S.C. No. 25(R).

<sup>5</sup> See, e.g., Great Lakes Comnet, Inc. Tariff F.C.C. No. 20, Section 17LECMI (Pages 17LECMI-I through Page 17LECMI-11.1).

Page 3

company for LEC MI and GLC. WTC provides consolidated billing by sending each of the Complainants a monthly invoice that includes charges for services purportedly provided by LEC MI, GLC, WTC, and a fourth entity, Westphalia Broadband, Inc. Those invoices contain rates and charges that do not comply with the Commission's pricing rules applicable to CLEC switched access charges, as described below. The Defendants also cooperated in establishing traffic routing arrangements that resulted in unnecessarily high transport charges that form the primary basis for the Complainants' ongoing billing disputes and precipitated this complaint. LEC MI routes most, if not all, of the switched access traffic at issue through GLC's tandem switch. The transport path between LEC MI and GLC goes through WTC's service area and WTC charges the IXCs for a portion of the transport mileage charges.

The Complainants -- Verizon, CenturyLink and Sprint -- are IXCs. Each has been billed by the Defendants and each has disputed various charges.

### **B. The Traffic at Issue and the Rates Defendants Have Charged**

While individual Complainants may have disputed various charges billed by WTC prior to 2012, the issues began escalating in early 2012, when LEC MI began aggregating substantial volumes of toll-free (8YY) traffic that appeared to be originated by a wireless company's end users throughout the country.<sup>6</sup> This resulted in an enormous spike in the amount of switched access traffic delivered by LEC MI and the other Defendants to each of the Complainants, as demonstrated on the following three pages. The vast majority of the traffic is interstate.

---

<sup>6</sup> Ordinarily, 8YY calls placed by consumers in Texas or California are routed by the local carrier to the interexchange carrier that serves the toll-free customer (after performing an 8YY database dip); the IXC then delivers the call to its customer. Under the arrangement at issue here, all of the toll-free calls generated anywhere in the country by the CMRS provider's end users are routed to LEC MI's switch near Detroit, and then to GLC's distant tandem before being handed off to the appropriate IXC.

Ms. Rosemary McEnery  
February 26, 2014  
Page 4

For example, WTC invoiced Verizon for 5,495,919 tandem switching minutes of use (“MOUs”) in April 2011. In April 2012, that figure jumped to 15,427,878 MOUs. Similarly, in December 2011, WTC billed Verizon for 8,468,748 tandem switching MOUs. A year later, the number of MOUs increased to 24,925,266.<sup>7</sup> These figures represent nearly a three-fold increase in the amount of tandem switched traffic year-over-year.

<sup>7</sup> The figures shown in the text are interstate minutes of use. Even though about 90% of the 8YY traffic delivered to Verizon is interstate, WTC applied a default PIU factor in many of its invoices, which led to an understatement of the amount of interstate MOUs billed.

Ms. Rosemary McEnery

February 26, 2014

Page 5

Similarly, WTC invoiced CenturyLink for 2,925,028 tandem switching MOUs in May 2011. That number jumped to 6,258,377 MOUs in May 2012, and 11,374,303 MOUs in May 2013. This pattern has recurred between 2010 and 2013. From January 2010 to December 2013, WTC's billing to CenturyLink skyrocketed from 232,808 MOUs to 10,410,534 MOUs. This is nearly a 45-fold increase. WTC's increases in billings to CenturyLink are reflected in the following graph.

Ms. Rosemary McEnery

February 26, 2014

Page 6

Sprint's experience is also similar. For example, WTC invoiced Sprint for 880,673 originating interstate tandem switching MOUs in March 2011. In March 2012, that figure jumped by 113%, to 1,882,840 originating interstate MOUs. Similarly, in May 2011, WTC billed Sprint for 836,641 originating interstate tandem switching MOUs. A year later, the number of originating MOUs more than tripled, to 2,518,840. The growth in traffic witnessed by Sprint is reflected on the following chart.

LEC MI routes all of the 8YY and other switched access traffic across LATA boundaries to GLC's tandem switch, a distance of 83 miles. GLC subsequently hands off the traffic to each of the Complainants. Michigan Bell Telephone Company d/b/a AT&T Michigan ("AT&T Michigan"), the largest local exchange carrier in the Detroit area, owns and operates a tandem switch located approximately seven (7) miles from LEC MI's end office in Southfield. On information and belief, Inteliquent also operates a tandem switch within a few miles of LEC MI's end office. Despite the presence of these two nearby tandems, LEC MI does not route access traffic through either of one of them. Instead, it routes all of the switched access traffic to GLC's distant tandem, thereby unnecessarily increasing tandem switched transport mileage charges.

GLC provides the transport between the LEC MI and GLC switches, as well as tandem switching functions. To do so, GLC presumably arranged to construct or lease facilities outside of its local exchange area, including in the service areas of two incumbent LECs, AT&T Michigan and Frontier Telephone Company ("Frontier"), in order to transport the traffic from LEC MI's Southfield end office to GLC's tandem in Westphalia. This was accomplished in cooperation with LEC MI, as it is LEC MI that initially routes the traffic through its end office to GLC's distant tandem, and with WTC, as the traffic is also transported through its service area and WTC bills Complainants for a portion of the transport charges (even though there is no evidence that any of the traffic is carried over WTC's facilities).

Ms. Rosemary McEnery  
February 26, 2014  
Page 7

WTC bills Complainants (on behalf of GLC and WTC) for the 83 miles of transport, at the NECA rate (which is referenced in GLC's tariff) of \$0.0004180 per minute per mile.<sup>8</sup> This rate is more than **30 times higher** than AT&T Michigan's interstate tariff rate for tandem switched transport. The AT&T Michigan rate is only \$0.000013 per minute per mile, while Frontier charges even less, \$0.000002 per minute per mile.<sup>9</sup> Multiplying GLC's rate by 83 miles produces a charge of 3.47 cents per minute, which is the amount that WTC bills each of the Complainants.<sup>10</sup> Since LEC MI began aggregating substantial volumes of nationwide CMRS traffic, this arrangement has resulted in a huge increase in GLC's transport and tandem switching charges.

Under the Commission's rules, a CLEC engaged in access stimulation may not charge switched access rates higher than those of "the price cap LEC with the lowest switched access rates in the state."<sup>11</sup> Even if that rule is not applicable, a CLEC is required to comply with the general CLEC benchmark rule, under which a CLEC may not charge rates higher than those charged by "the competing ILEC."<sup>12</sup> In this case, the competing ILEC is AT&T Michigan. Had the traffic been appropriately handed to the AT&T tandem, there would have been 7 miles or less of transport billed at the AT&T rate.

The Defendants have chosen to route aggregated traffic through LEC MI, sending that traffic 83 miles away to the GLC tandem, regardless of the fact that there are closer tandem switch locations. Complainants are unaware of any network efficiencies gained by this unorthodox routing scheme. Rather, by routing traffic through a distant tandem instead of through a tandem switch located close to LEC MI's end office, Defendants have increased the charges to IXCs and toll-free service providers and have failed to route switched access traffic to Complainants in a reasonable and cost-effective manner.<sup>13</sup> This imposition of excessive transport charges on Complainants fails to provide any corresponding benefits to consumers.

---

<sup>8</sup> Nearly 99% of the end office-to-tandem transport charges shown on WTC-issued invoices are billed on behalf of GLC. The remaining 1% is billed by WTC, even though it is not clear whether any of the traffic is transported on WTC's network. GLC and WTC both charge the same rate for transport.

<sup>9</sup> AT&T Corp. Tariff F.C.C. No. 2, § 17.15.1.B (AT&T Michigan's transport rate in Frontier territory is \$0.000002 per minute per mile); Frontier Telephone Companies Tariff FCC No. 5, § 4.6.2(A).

<sup>10</sup> Intrastate traffic is billed at the rates in the carriers' intrastate tariffs.

<sup>11</sup> 47 C.F.R. § 61.26(g)(1).

<sup>12</sup> *Access Charge Reform, Reform of Access Charges Imposed by Competitive Local Exchange Carriers*, Seventh Report and Order and Further Notice of Proposed Rulemaking, 16 FCC Rcd 9923 (2001) ("CLEC Price Cap Order"); 47 C.F.R. § 61.26(b).

<sup>13</sup> As explained below, LEC MI has also declined to implement direct trunking to an IXC's network, which would minimize or eliminate the excessive access charges.

Page 8

### CLAIMS

All of the Complainants have disputed a number of Defendants' charges and, for the most part, their claims are similar. To the extent possible, this informal complaint identifies issues and claims that the Complainants have in common. Because some of the facts are specific to each Complainant, and some individual Complainants have additional claims that are particular to their experience, those issues are described below with a notation that the specific claim is being raised by an individual Complainant.

**GLC's Transport Charges are Unjust and Unreasonable in Violation of Section 201 of the Act.** The Communications Act requires that "[a]ll charges, practices, classifications, and regulations for and in connection with [interstate] communication service, shall be just and reasonable". 47 U.S.C. § 201(b). In order to ensure that CLEC switched access rates are just and reasonable, the Commission established a benchmark rate more than a dozen years ago, and held that CLEC rates priced at or below the benchmark are presumptively reasonable.<sup>14</sup> To implement the benchmark requirement, the Commission adopted a rule which prohibits a CLEC (including the Defendants here) from tariffing switched access rates higher than those charged by the competing ILEC. 47 C.F.R. § 61.26(b).

Access traffic transported by GLC between Southfield and Westphalia originates in and traverses AT&T Michigan's service area, and then passes through Frontier's territory before reaching the GLC tandem. WTC is billing Complainants the NECA transport rate for traffic (\$0.0004180 per minute per mile) over the entire 83-mile route, including traffic carried within the service areas of AT&T Michigan and Frontier. The rate charged by GLC is more than **30 times higher** than AT&T Michigan's tariff rate for tandem transport, which is only \$0.000013 per minute. GLC's rate is also **209 times higher** than Frontier's tandem transport rate of \$0.000002 per minute per mile.<sup>15</sup>

GLC is a CLEC, and is required to comply with the Commission's CLEC benchmark rule for transport services. Under 47 C.F.R. § 61.26(b), GLC may not charge rates that are higher than those charged by "the competing ILEC." The competing ILEC is AT&T Michigan because the access traffic originates in and transverse AT&T Michigan's service area. WTC is not billing Complainants the rates charged by the competing ILEC. Instead, it is billing Complainants GLC's higher rates, even though it is transporting access traffic through the service areas of AT&T Michigan and Frontier.

Because GLC is billing Complainants a rate that exceeds the benchmark, it is in violation of the Commission's rate cap rule for CLECs. Accordingly, its rate for switched transport is unjust and unreasonable in violation of Section 201 of the Act.

<sup>15</sup> See page 7 and n. 9, *supra*.

Ms. Rosemary McEnery  
February 26, 2014  
Page 9

Although the Commission created a “narrow exemption” from the benchmark rules to allow some CLECs in rural areas to charge access rates higher than the competing ILEC, Defendants are not entitled to that “rural exemption” here.<sup>16</sup> That rule applies in the following, limited circumstances:

We conclude that the rural exemption to our benchmark limitation on access charges will be available for a CLEC competing with a non-rural ILEC, where no portion of the CLEC's service area falls within: (1) any incorporated place of 50,000 inhabitants or more, based on the most recently available population statistics of the Census Bureau or (2) an urbanized area, as defined by the Census Bureau. Thus, if any portion of a CLEC's access traffic originates from or terminates to end users located within either of these two types of areas, the carrier will be ineligible for the rural exemption to our benchmark rule. Relying on information that is readily and publicly available, this definition excludes from the exemption those CLECs operating within reasonably dense areas that are not typically considered as rural.<sup>17</sup>

The vast majority of traffic billed to Complainants by WTC originates in the Southfield wire center owned by LEC MI. According to the latest census figures, Southfield has a population of 72,507,<sup>18</sup> which does not qualify this location as rural. Thus, the rural exemption does not apply to the Defendants' access traffic. Defendants must comply with the benchmark rules and, thus, may not charge switched access rates higher than those of the competing ILEC. Because they have charged rates that exceed the benchmark, their access rates are unjust, unreasonable and unlawful.

**Defendants are Engaged in an Unlawful “Mileage Pumping” Scheme.** As in the recent *Alpine* case,<sup>19</sup> LEC MI and GLC have manipulated the points of interconnection “with the intent and effect of ‘pumping’ mileage charges,” a practice the Commission ruled is unjust and unreasonable in violation of § 201(b) of the Act. AT&T Michigan and Inteliquent each operate tandem switches located seven miles or less from LEC MI's end office in Southfield. Both are presumably capable of handling all of the 8YY and other switched access traffic routed through LEC MI's end office. LEC MI, however, has failed to deliver traffic to the Complainant IXCs in the most direct and cost-effective manner by routing calls through one of the nearby tandems.

Complainants are unaware of any network efficiencies gained by this unorthodox routing scheme. Indeed, there is no legitimate technical or other reason – and Defendants have not

Page 10

articulated one -- why a CLEC would route large amounts of traffic from an urban area (a Detroit suburb) to a distant, rural tandem office in a different LATA, then back to the urban area, before handing the traffic off to IXC's. Rather, by routing traffic through a distant tandem instead of through a tandem switch located close to LEC MI's end office, Defendants have failed to route switched access traffic to Complainants in a reasonable and cost-effective manner. In so doing, they have dramatically increased the charges to IXC's. As the Commission held in *Alpine*, there is no justification for imposing additional mileage costs on IXC's without providing any corresponding benefits to consumers -- of which there are none here.

Defendants are acting in concert to route the traffic at issue. The access traffic is initially switched by LEC MI, which has chosen not to route the traffic in the most efficient and cost-effective manner. Instead, it arranged with GLC to have GLC pick up and transport large volumes of access traffic across LATA boundaries between LEC MI's end office in Southfield and the GLC tandem switch in Westphalia. GLC took the steps necessary to lease or establish transport and associated facilities in AT&T Michigan's service territory in order to transport the traffic across LATA boundaries, and through Frontier's service territory, to its distant tandem switch in Westphalia. Both LEC MI and GLC are culpable because they jointly agreed to route the traffic in the manner described above. WTC, in turn, bills the unnecessarily inflated mileage charges on behalf of GLC and itself.

Because Defendants' routing arrangements are unjust and unreasonable, the excessive tandem transport charges they have billed Complainants are also unreasonable and unlawful.

**LEC MI's Refusal to Provide Direct Connections and Route the Switched Access Traffic to Verizon Was Unreasonable (Verizon Claim).** As explained above, the Defendants' routing arrangement, designed to extract excessive mileage charges, is an unreasonable practice under the *Alpine* precedent. Not only did LEC MI choose not to route traffic to a tandem switch much closer to its end office in the same LATA, but it also declined to implement measures requested by Verizon that would minimize or eliminate the excessive transport charges. Its refusal to do so was unreasonable.

In mid-2013, Verizon requested LEC MI to establish direct trunks between its Southfield end office and Verizon's network that would be capable of handling the traffic now being routed to the distant GLC tandem. Direct trunking is a common, efficient practice that carriers use to minimize tandem transport mileage charges when traffic volumes warrant. On August 26, 2013, LEC MI responded in an e-mail message that it would not establish direct trunks that would carry toll-free traffic (which is the vast majority of the traffic) between the two networks. The stated reason for denying Verizon's request was that LEC MI "do[es] not do toll free dips on our [Southfield] end office at this time, so all our toll free traffic would head over to the tandem for completion." In other words, LEC MI claimed that because it does not perform the 8YY data base query, it could not segregate 8YY (toll free) calls destined for Verizon and route those 8YY calls over the direct trunks that Verizon had requested.

Ms. Rosemary McEnery  
February 26, 2014  
Page 11

This refusal is not credible for several reasons. First, the industry's Local Exchange Routing Guide (LERG) indicates that LEC MI's Southfield office is SSP capable, meaning that the switch can perform an 8YY data base query. Second, LEC MI's intrastate and interstate tariffs include rates for "800 Data Base Access Queries."<sup>20</sup> Under the Act, LEC MI is required to provide service on reasonable request, consistent with the terms of its tariff. 47 U.S.C. §§ 201(a), 203. And third, from 2011 through June 2013, Verizon was billed the LEC MI tariffed rates for 8YY data base dips.<sup>21</sup> Thus, there does not appear to be any justification for LEC MI's unwillingness to perform the 8YY data base dip and route 8YY traffic to Verizon, either over direct trunks or through a closer tandem.

Because LEC MI's tariff includes rates for performing the 8YY data base dip and because it billed Verizon its 8YY dip charges for more than 18 months, its unwillingness to implement this solution is unreasonable, contrary to the express terms of its tariff, and therefore unlawful.

**Defendants are Engaging in Access Stimulation, Without Following the Commission's Rules.** In November 2011, the Commission adopted new rules "to address the adverse effects of access stimulation and to help ensure that interstate switched access rates remain just and reasonable, as required by section 201(b) of the Act."<sup>22</sup> One of the criteria used to determine whether a CLEC is engaged in access stimulation is if the CLEC "has had more than a 100 percent growth in interstate *originating and/or terminating* switched access minutes of use in a month compared to the same month in the preceding year."<sup>23</sup>

Shortly after the Commission adopted the *Connect America Fund* order, LEC MI began aggregating switched access traffic originated by a CMRS provider's end users around the country. By April 2012, the volume of tandem switched traffic billed by WTC to Verizon had increased significantly, to 15.4 million MOU. This was 181 percent higher than the number of tandem switched MOU that WTC had billed Verizon the previous April (less than 5.5 million MOU). This pattern repeated itself throughout the year. While each IXC experienced different fluctuations in volumes of billed traffic at different points in time, the chart below shows that one or more of the Complainants experienced more than a 100% increase in interstate switched traffic (year-over-year)

---

<sup>20</sup> See GLC Tariff F.C.C. No. 20, Section 17 LECMI.2.2(B) ("The rate charged by LEC Michigan is the applicable current rate at Frontier Telephone Companies Tariff F.C.C. No. 5 Section 4.6.3-Michigan, Basic 800/877/888 Data Base Query Charge and Premium 800/877/888 Data Base Query Charge.") LEC MI's intrastate tariff includes a specific rate (\$0.0090183) for "800 Data Base Access Service Queries." See GLC's Tariff M.P.S.C. No. 25(R), Section 17LECMI.2.2(B).

<sup>21</sup> After Verizon asked LEC MI to provide direct connections, WTC started billing Verizon GLC's rate for 8YY data base queries, beginning with the July 2013 invoice.

Most of the traffic involved in this dispute is aggregated 8YY traffic that appears to originate from a wireless carrier's end users located throughout the United States. The 8YY traffic is delivered to LEC MI which, in turn, routes the calls to the GLC tandem for ultimate delivery to the IXC's associated with the 8YY numbers. Thus, this case involves an originating traffic-pumping arrangement. 8YY calls have characteristics that are similar to the terminating traffic involved in other access stimulation cases, and are open to the same types of arbitrage as terminating traffic. Calls to an 800 number can originate from any domestic location, and from wireless or VoIP phones, as well as land lines. The local exchange company that originates the call must perform a database dip to ensure the call goes to the correct IXC. The IXC has no control over how the call is originated, but incurs charges for the origination and data base query required to route the call to it.

Aggregation often occurs when calls originated by a wireless or VoIP handset are sent to a central location to perform the database dip. By routing aggregated 8YY traffic through CLECs and rural LECs, companies are able to increase the volumes and amount of switched access they bill, and increase the distance they transport the traffic, thereby inflating mileage charges and maximizing the charges that are billed to IXC's. There is no identifiable network efficiency in this routing. When

Ms. Rosemary McEnery  
February 26, 2014  
Page 13

carriers cooperate in implementing these arrangements, they may engage in revenue-sharing agreements in which wireless or VoIP originators receive a “kickback” from the third party aggregators.<sup>24</sup> While there are legitimate reasons for aggregating traffic (e.g., wireless and VoIP providers are not able to initiate the data base dip necessary to determine which carrier 8YY calls should be delivered to without going through a LEC), the ability to channel large amounts of traffic through high-cost areas and to increase the mileage make these arrangements look more like traditional access stimulation and mile pumping situations that the Commission has previously addressed, and found unlawful.

At this time, and without the benefit of discovery, it is not known whether Defendants meet the second condition for identifying access stimulation: that they have “an access revenue sharing agreement, whether express, implied, written or oral, that over the course of the agreement, would directly or indirectly result in a net payment to the other party (including affiliates) to the agreement, in which payment by the rate-of-return LEC or competitive LEC is based on the billing or collection of access charges from interexchange carriers or wireless carriers.”<sup>25</sup>

The circumstances suggest that there is such an agreement (“express or implied”). The participants are aggregating 8YY traffic from across the country, routing it to a small CLEC end office near Detroit and then delivering it to a tandem switch across Michigan – in a manner designed to extract millions of dollars in excessive switched access charges. Presumably, the wireless carrier is being compensated in some manner by agreeing to participate in this arrangement. LEC MI is likely obtaining some benefit by participating in this mileage pumping and access stimulation arrangement with the other Defendants. Because it is providing access services between two carriers, the CMRS provider and GLC, LEC MI is not entitled to bill Complainants for end office switching, and it does not provide or charge for tandem switching. Consequently, LEC MI’s charges (net of credits) for traffic from its Southfield end office are only a small portion of the overall charges that WTC bills the Complainants; the vast majority of the charges are billed on behalf of GLC. LEC MI’s charges, by themselves, would not provide a strong financial incentive for LEC MI to act as an aggregator of nationwide wireless 8YY traffic and route tremendous volumes of access traffic through its local switch. Thus, while it instigated the process (aggregating nationwide traffic) that resulted in the tremendous stimulation of access traffic, it would not make sense for LEC MI to purposefully route large volumes of traffic through its switch unless it obtains some amount of compensation from its partnering LECs for its “effort.” Sharing a portion of the inflated access charges resulting from the “mileage pumping” scheme would appear to be the most likely business arrangement.

A CLEC that is engaged in access stimulation may not file an interstate switched access tariff with prices above the rates “of the price cap LEC with the lowest interstate switched access rates in

---

<sup>24</sup> See, e.g., *Hypercube Telecom, LLC v. Level 3 Communications, LLC*, 2010 Cal. PUC LEXIS 189 (2009).

<sup>25</sup> 47 C.F.R. § 61.3(bbb)(1)(i).

Page 14

the state.”<sup>26</sup> The Commission’s rules also require a CLEC engaged in access stimulation to file revised interstate switched access tariffs that comply with the foregoing pricing requirement within 45 days of commencing access stimulation.<sup>27</sup> None of the Defendants participating in this arrangement have complied with either of these rules. None of them have filed revised tariffs, as required by section 61.26(g)(2). In Michigan, the price cap LEC with the lowest access rates is Frontier.<sup>28</sup> None of the Defendants have recalibrated their access rates so that they do not exceed Frontier’s rates, as required by section 61.26(g)(1). Instead, their tariff rates are greatly in excess of Frontier’s rates.

The Defendants’ failure to comply with the benchmark requirement violates Commission rules and policies. Indeed, Defendants’ practices here are identical to those the Commission condemned in the *Connect America Fund* order: “[t]he combination of significant increases in switched access traffic with unchanged access rates results in a jump in revenues and thus inflated profits that almost uniformly make the LECs’ interstate switched access rates unjust and unreasonable under section 201(b) of the Act.”<sup>29</sup> The Commission found that access stimulation imposes undue costs on consumers, harms competition, and inefficiently diverts capital away from more productive uses.<sup>30</sup> To prevent these adverse effects and ensure that interstate access rates are priced at reasonable levels, the Commission adopted the rules described above. The Defendants’ failure to comply with those pricing rules is unreasonable and, therefore, unlawful.

**GLC’s Interstate Transport Rates Are Not “Deemed Lawful.”** GLC’s tariff transmittals were not filed on a “streamlined” basis and, thus, are not entitled to “deemed lawful” status. A review of tariff transmittals filed by GLC in the past two years for its own services indicates that GLC filed less than 7 days in advance of a rate decrease or less than 15 days (for a rate increase).<sup>31</sup> The tariff page that describes GLC’s rates and charges for tandem switched transport and other tandem functions states: “Issued: September 25, 2003” and “Effective: October 1, 2003.” On its face, the tariff page describing these rates was filed less than 7 days before the effective date. Because GLC did not follow the streamlined procedure in Section 204(a)(3) of the Act, 47 U.S.C. § 204(a)(3), with respect to its tandem-related rates, those tariff provisions “shall not be deemed lawful.” *Streamlined Tariffing Order*, 12 FCC Rcd 2170, ¶ 34 (1997). “By definition,” tariffs “not filed pursuant to that section [] are not [] accorded the [deemed lawful] treatment provided for in that section.” *See also North County Communications v. Verizon*, 685 F. Supp. 2d 1112 (2010) (CLEC that did not file tariff within time frame required to obtain streamlined treatment “cannot avail itself

<sup>26</sup> 47 C.F.R. § 61.26(g)(1). *Connect America Fund*, 26 FCC Rcd 17663, ¶679 (2011).

<sup>27</sup> 47 C.F.R. § 61.26(g)(2).

<sup>28</sup> *See* page 7 and n. 9, *supra*.

<sup>29</sup> *Connect America Fund*, ¶ 657.

<sup>30</sup> *Id.*, ¶¶ 662-666.

<sup>31</sup> Two of the three tariff filings made since January 2012 that included changes in the rates, terms and conditions of GLC services were filed on only one or two days’ notice.

Ms. Rosemary McEnery  
February 26, 2014  
Page 15

of “deemed lawful” status.”) Accordingly, the Commission may set aside those rates and require GLC to refund charges that were unreasonable and unjust.

**GLC’s Interstate Access Tariff Does Not “Contain Clear and Explicit” Language About Its Rates, as Required by 47 C.F.R. § 61.25.** The Communications Act requires carriers to file tariffs describing all services and their associated charges. 47 U.S.C. § 203(a). The Commission’s implementing regulations require that “all tariff publications must contain clear and explicit explanatory statements regarding the rates and regulations.” 47 C.F.R. § 61.2(a). In its *Eighth Report and Order*, the Commission made clear that “access tariffs ... must clearly identify each of the services offered and the associated rates, terms, and conditions.”<sup>32</sup> The Commission has also emphasized that a carrier may not charge for services that are not clearly described in its tariff, for tariffed rates “do not exist in isolation. They have meaning only when one knows the services to which they are attached.”<sup>33</sup>

The Commission permits non-dominant carriers to cross-reference the rate provisions of another carrier’s interstate access tariffs. However, “section 61.25 of the Rules, consistent with section 203 of the Act, requires the carrier to ‘specifically identify in its tariff the rates being cross-referenced so as to leave no doubt as to the exact rates that will apply.’”<sup>34</sup>

GLC’s interstate switched access tariff suffers from the defect identified in *All American*. Section 6-4 of the tariff states that “The rates in Section 17 of this Tariff for Switched Access Services ... are referenced to the **applicable current rates** in NECA Tariff F.C.C. No. 5.” This is problematic given the Commission’s observation in *All American* that Section 17 of NECA Tariff F.C.C. No. 5 “contains over 300 pages of rates” and multiple rate bands. Thus, GLC’s tariff language is unclear, ambiguous and open to multiple interpretations.

**Billing vs. Recorded Usage (CenturyLink Claim).** WTC is billing a significantly greater volume of MOUs to CenturyLink than has been recorded by CenturyLink’s switches. In January 2014, CenturyLink requested call detail records (CDRs) that support the November 2013 WTC

Page 16

invoice in order to allow CenturyLink to perform further analysis on the discrepancy. CenturyLink is concerned that it is been overbilled for interstate charges.

### **RELIEF REQUESTED**

As explained above, Defendants' routing arrangements, billing practices and charges violate sections 201 and 203 of the Act, Commission rules and policies. Accordingly, the Commission should find that the Defendants' switched access charges are unreasonable and unlawful.

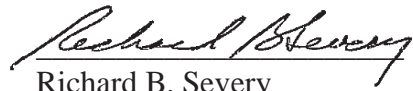

Complainants respectfully request that the Commission order Defendants to revise their bills to each Complainant. Defendants should be required to rerate all tandem switched transport traffic (1) using a reasonable distance of seven miles (the distance between LEC MI's end office and the nearby AT&T Michigan tandem). Defendants should also be required to rerate all switched access charges to comply with the benchmark rates set forth in section 61.26 of the Commission's rules. Because Defendants are engaged in access stimulation, the appropriate rates to apply are the switched access rates of Frontier, which is the price cap LEC with the lowest switched access rates in the state. In no event should Defendants be permitted to charge rates higher than those of AT&T (the competing ILEC) for tandem transit traffic.

Complainants request that the Commission order Defendants to issue credits to each of the Complainants equal to the amounts Defendants have unlawfully billed them, and refund to each of the Complainants all unlawful charges that the Complainants have paid to Defendants. The actual amounts owed to each Complainant will be determined through the complaint process. The Commission should also order Defendants to waive all "late payment charges," because they should not have been imposed on improperly issued invoices and unlawful charges.

Ms. Rosemary McEnery  
February 26, 2014
